The Dynamics of Disaster Susan W. Kieffer, 2013-10-14 If you are an amateur weather geek disaster wonk or budding student of earth sciences you will want to read this book Seattle Times In 2011 there were fourteen natural calamities that each destroyed over a billion dollars worth of property in the United States alone In 2012 Hurricane Sandy ravaged the East Coast and major earthquakes struck in Italy the Philippines Iran and Afghanistan In the first half of 2013 the awful drumbeat continued a monster supertornado struck Moore Oklahoma a powerful earthquake shook Sichuan China a cyclone ravaged Queensland Australia massive floods inundated Jakarta Indonesia and the largest wildfire ever engulfed a large part of Colorado Despite these events we still behave as if natural disasters are outliers Why else would we continue to build new communities near active volcanoes on tectonically active faults on flood plains and in areas routinely lashed by vicious storms A famous historian once observed that civilization exists by geologic consent subject to change without notice In the pages of this unique book leading geologist Susan W Kieffer provides a primer on most types of natural disasters earthquakes tsunamis volcanoes landslides hurricanes cyclones and tornadoes By taking us behind the scenes of the underlying geology that causes them she shows why natural disasters are more common than we realize and that their impact on us will increase as our growing population crowds us into ever more vulnerable areas Kieffer describes how natural disasters result from

changes in state in a geologic system much as when water turns to steam By understanding what causes these changes of state we can begin to understand the dynamics of natural disasters In the book's concluding chapter Kieffer outlines how we might better prepare for and in some cases prevent future disasters She also calls for the creation of an organization something akin to the Centers for Disease Control and Prevention but focused on pending natural disasters

Experience, Theory and Practice Stefano Aversa, Leonardo Cascini, Luciano Picarelli, Claudio Scavia, 2018-04-17 Landslides and Engineered Slopes Experience Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides Naples Italy 12-19 June 2016 The book aims to emphasize the relationship between landslides and other natural hazards Hence three of the main sessions focus on Volcanic induced landslides Earthquake induced landslides and Weather induced landslides respectively while the fourth main session deals with Human induced landslides Some papers presented in a special session devoted to Subareal and submarine landslide processes and hazard and in a Young Session complete the book Landslides and Engineered Slopes Experience Theory and Practice underlines the importance of the classic approach of modern science which moves from experience to theory as the basic instrument to study landslides Experience is the key to understand the natural phenomena focusing on all the factors that play a major role Theory is the instrument to manage the data provided by experience following a mathematical approach this allows not only to clarify the nature and the deep causes of phenomena but mostly to predict future and if required manage similar events Practical benefits from the results of theory to protect people and man made works Landslides and Engineered Slopes Experience Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics geotechnical engineering engineering geology and geology

The Secure and the Dispossessed Nick Buxton, Ben Hayes, 2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene They are securing their assets at the expense of the planet and its inhabitants The Secure and the Dispossessed looks at these deadly approaches with a critical eye It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water Topics covered include

geoengineering militarism refugee protection greenwashing and the agricultural crisis among others Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Overcoming Barriers to Deployment of Plug-in

Electric Vehicles National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2015-06-26 In the past few years interest in plug in electric vehicles PEVs has grown Advances in battery and other technologies new federal standards for carbon dioxide emissions and fuel economy state zero emission vehicle requirements and the current administration's goal of putting millions of alternative fuel vehicles on the road have all highlighted PEVs as a transportation alternative Consumers are also beginning to recognize the advantages of PEVs over

conventional vehicles such as lower operating costs smoother operation and better acceleration the ability to fuel up at home and zero tailpipe emissions when the vehicle operates solely on its battery There are however barriers to PEV deployment including the vehicle cost the short all electric driving range the long battery charging time uncertainties about battery life the few choices of vehicle models and the need for a charging infrastructure to support PEVs What should industry do to improve the performance of PEVs and make them more attractive to consumers At the request of Congress Overcoming Barriers to Deployment of Plug in Electric Vehicles identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers This report examines the characteristics and capabilities of electric vehicle technologies such as cost performance range safety and durability and assesses how these factors might create barriers to widespread deployment Overcoming Barriers to Deployment of Plug in Electric Vehicles provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers Through consideration of consumer behaviors tax incentives business models incentive programs and infrastructure needs this book studies the state of the industry and makes recommendations to further its development and acceptance

Alternative Accountabilities in Global Politics Brent J. Steele, 2013 In fields such as politics international relations public administration and international law there is a rapidly growing interest in the topic of accountability In this innovative new work Steele shows how we might recognize how an alternative form of accountability in global politics has been present for some time and that furthermore this form s continued presence remains one of the most politically powerful if not endurable possibilities for resistance in the near future This book argues that the physical and visually shocking outcomes of violence found on the bodies of humans as well as the buildings and landscapes which surround us specifically the scars they leave behind remain one of our most compelling forms of accountability Steele develops the theoretical argument on scars and exteriority utilizing insights from several philosophical and theoretical resources including Hannah Arendt Erving Goffmann and Richard Rorty The work examines scars and their effects through several illustrations including the accounts of Emmett Till Iranian protestor Neda Agha Soltan the Syrian boy Hamza al Khateeb the massacre in WWII and then memorializing throughout the 20th century of the Lidice children in the modern day Czech Republic the particular architecturally destructive outcomes of the 2008 9 Gaza War the loss of the Twin Towers in New York as well as a variety of violent scars

found on the landscapes of Europe and Southeast Asia Emphasizing the importance of the space and time of scars the book illustrates how an alternative form of accountability in the scar can be a useful disruptive spontaneous but also creative practice to challenge the discourses of violence which remain with us today
