Physical Properties of Matter

Characteristics that help us better understand our world

When we see an apple like the one at the top of this page, we immediately start to notice things about it. We

characteristic of **matter**. We can observe the physical characteristics of matter in any **physical state** – solid, liquid, or gas. There are many different physical properties of matter – magnetism, relative density, solubility, physical state, volume, electrical conductivity, and thermal conductivity.

Magnetism

The magnetism of an object can be described by its attraction to a magnet. Magnetic objects are made of certain kinds of metal. Magnets create a magnetic field. If there is an object that is magnetic within that field, the object will move toward the magnet. The apple on the top of this page is not magnetic, while it may not be attracted to a magnet, the

matter parts in another substance. When a substance dissolves

such as sugar, dissolves into a liquid, like water. The air you

State and Volume

liquids, and gases are all states of matter that can be observed
