

Properties of Waves (Lessons 23-30) Note-Taking Guide

Using what you learn in **Section 2: Lessons 23-30**, take notes on key concepts by answering the following prompts in your own words.

1. Describe the properties of waves.

▪ Essential Vocabulary

- Wave medium – a substance that carries a wave (or disturbance) from one location to another
- Oscillation – a repetitive motion that usually occurs about a center point or equilibrium.
- Equilibrium – a position or state to which an oscillating object eventually returns after a disturbance is gone.
- Wave – a repeating disturbance that transports energy from one place to another.
 - Mechanical wave – waves that can travel only through matter such as solid liquid or gas.
 - They Cannot Travel in space.
 - Mechanical Wave – Sound Wave
 - Electromagnetic wave – a wave that doesn't require matter to propagate
 - Transverse wave – the oscillation is perpendicular to the direction the wave is traveling.
 - Longitudinal wave – the oscillation is parallel to the direction the wave is traveling
 - All energy travels at the same speed as light – transverse waves
- Light wave – transverse wave and can travel through vacuum, space
- Sound – a vibration that travels in a longitudinal – parallel wave – cannot travel through a vacuum or space
- Medium – medium that contains a solid liquid and matter
- Vacuum – the absence of solid, liquid and matter – such as space

Vacuum – light can travel the fastest. Sound cannot travel through a vacuum

Gas – light can travel through gas but is hindered a little. Such as looking through a window and seeing dust particles. Sound can travel through gas.

Liquid – light can pass through liquid but it's harder to see. Light is reflected and refracted so it changes directions when it hits a different medium. Reflection happens on the surface of water. Sound is refracted when it changes medium from gas to liquid.

Solid – light doesn't travel through a wall. Sound travels fastest through solid because sound waves vibrate all at once

- What is a wave?
- Give an example to illustrate how a wave transports energy from one place to another without transporting matter.
