Handbook of Research on Science Education Norman G. Lederman, Dana L. Zeidler, Judith S.

Lederman, 2023-03-17 Volume III of this landmark synthesis of research offers a comprehensive state-of-the-art survey highlighting new and emerging research perspectives in science education. Building on the foundations set in Volumes I and II, Volume III provides a globally minded up-to-the-minute survey of the science education research community and represents the diversity of the field. Each chapter has been updated with new research and new content, and Volume III has been further developed to include new and expanded coverage on astronomy and space education, epistemic practices related to socioscientific issues, design-based research, interdisciplinary and STEM education, inclusive science education, and the global impact of nature of science and scientific inquiry literacy. As with the previous volumes, Volume III is organized around six themes: theory and methods of science education research, science learning, diversity and equity, science teaching, curriculum and assessment, and science teacher education. Each chapter presents an integrative review of the research on the topic, pulling together the existing research, working to understand historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty, scholars, and graduate students and pointing towards future directions of the field, *Handbook of Research on Science Education: Research*, Volume III offers an essential resource to all members of the science education community.

Exemplars, Imitation, and Character Formation Eric Yang, 2024-08-22 This volume examines the role and relevance of exemplars and the practice of imitation in character development and formation. While the role of exemplars and imitation in spiritual and moral formation has been an integral part of many religious and wisdom traditions in recent times, there has been limited theological and philosophical investigation into it, and a dearth of interdisciplinary discussion. The book brings together relevant research and insights from leading experts within philosophy, psychology, and theology, with a slight emphasis on Christian approaches to exemplars and imitation, especially given the reflection on these themes throughout the history of the Christian intellectual and mystical tradition. Many of the contributions display an interdisciplinary approach into these issues; hence, this volume will be of interest to philosophers, psychologists, theologians, and others who work in moral psychology and character formation.

Curriculum Planning and Instructional Design for Gifted Learners Joyce VanTassel-Baska, Ariel Baska, 2021-09-23 This updated third edition of *Curriculum Planning and Instructional Design for*

Gifted Learners **Theory-Based Data Analysis for the Social Sciences** Carol S. Aneshensel, 2012-12-11 This book presents the elaboration model for the multivariate analysis of observational quantitative data. This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified. Two complementary strategies are used: an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable. The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results. The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it. These studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace, subjective age identification during the transition to adulthood, and the relationship between religious and paranormal beliefs. The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model. Using real data, not contrived examples, the text provides a step-by-step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions. *The Oxford Handbook of Philosophy of Science* Paul Humphreys, 2016-08-04 This handbook provides both an overview of the state of the art scholarship in philosophy of science as well as a guide to new directions in the discipline. Section I contains broad overviews of the main lines of research and the state of established knowledge in six principal areas of the discipline including computational, physical, biological, psychological, and social sciences as well as general philosophy of science. Section II covers what are considered to be the traditional topics in the philosophy of science such as causation, probability models, ethics, and values and explanation. Section III identifies new areas of investigation that show promise of becoming important areas of research including the philosophy of astronomy and astrophysics, data complexity theory, neuroscience simulations, post-Kuhnian philosophy, post-empiricist epistemology, and emergence. Most chapters are accessible to scientifically educated non-philosophers as well as to professional philosophers and the contributors, all leading researchers in their field, bring diverse perspectives from the North American, European, and Australasian research communities. This volume is an essential resource for scholars and students.

Mechanical Choices Michael S. Moore, 2020-05-08

Mechanical Choices details the intimate connection that exists between morality and law the morality we use to blame others for their misdeeds and the criminal law that punishes them for these misdeeds This book shows how both law and morality presuppose the accuracy of common sense a centuries old psychology that defines people as rational agents who make honorable choices and act for just reasons It then shows how neuroscience is commonly taken to challenge these fundamental psychological assumptions Such challenges four in number are distinguished from each other by the different neuroscientific facts from which they arise the fact that human choices are caused by brain events the fact that those choices don t cause the actions that are their objects but are only epiphenomenal to those choices the fact that those choices are identical to certain physical events in the brain and the fact that human subjects are quite fallible in their knowledge of what they are doing and why The body of this book shows how such challenges are either based on faulty facts or misconceived as to the relevance of such facts to responsibility The book ends with a detailed examination of the neuroscience of addiction an examination which illustrates how neuroscience can help rather than challenge both law and morality in their quest to accurately define excuses from responsibility
