Nuclear Science Abstracts, 1975 *Eye movement-related brain activity during perceptual and cognitive processing* Andrey R. Nikolaev, Sebastian Pannasch, Junji Ito, Artem Belopolsky, 2014-09-23 The recording and analysis of electrical brain

activity associated with eye movements has a history of several decades. While the early attempts were primarily focused on uncovering the brain mechanisms of eye movements, more recent approaches use eye movements as markers of the ongoing brain activity to investigate perceptual and cognitive processes. This recent approach of segmenting brain activity based on eye movement behavior has several important advantages. First, the eye movement system is closely related to cognitive functions such as perception, attention, and memory. This is not surprising since eye movements provide the easiest and the most accurate way to extract information from our visual environment, and the eye movement system largely determines what information is selected for further processing. The eye movement-based segmentation offers a great way to study brain activity in relation to these processes. Second, on the methodological level, eye movements constitute a natural marker to segment the ongoing brain activity. This overcomes the problem of introducing artificial markers such as ones for stimulus presentation or response execution that are typical for a lab-based research. This opens possibilities to study brain activity during self-paced perceptual and cognitive behavior under naturalistic conditions such as free exploration of scenes. Third, by relating eye movement behavior to the ongoing brain activity, it is possible to see how perceptual and cognitive processes unfold in time, being able to predict how brain activity eventually leads to behavior. This research topic illustrates advantages of the combined recording and analysis of eye movements and neural signals such as EEG local field potentials and fMRI for investigation of the brain processes in humans and animals. The contributions include research papers, methodology papers, and reviews demonstrating conceptual and methodological achievements in this rapidly developing field.

Understanding the Molecular Mechanisms of Plant Responses to Abiotic Stress Sang Yeol Lee, Dae-Jin Yun, Jose M. Pardo, Motoaki Seki, Yan Guo, Abel Rosado, 2020-02-20. Plant responses to environmental stress are governed by complex molecular and biochemical signal transduction processes which act in coordination to determine tolerance or sensitivity at the whole plant level. Upon exposure to abiotic stress, plants express a sophisticated coordinated response to reprogram interconnected defense networks and metabolic pathways by alterations in the transcription, translation, and post-translational modification of defense-related genes and proteins. Traditionally, physiological and phenotypic responses were the major ones to be collected in plant stress biology. However, modern studies include the identification of key genes that influence stress tolerance and plant growth under the imposing stress and the verification of gene functions using knock-out mutants or overexpression lines. In addition, genomics has become a necessary tool for the understanding of plant stress responses at the whole genome levels. The identification of stress-tolerant plant resources and the investigation of the functional role of the genetic variants is also a valuable tool in this research field. Recently, the advent of CRISPR-Cas genome editing technology enables these variations to be introduced in crops for improved stress tolerance traits. Through the understanding of the molecular mechanisms involved in plant signaling in response to abiotic stress and crop performance characters under stress conditions, we hope to open new ways for the breeding of superior crops.

Fundamental Elements of Applied Superconductivity in

Electrical Engineering Yinshun Wang, 2013-06-24 Superconducting technology is potentially important as one of the future smart grid technologies. It is a combination of superconductor materials, electrical engineering, cryogenic insulation, cryogenics, and cryostats. There has been no specific book fully describing this branch of science and technology in electrical engineering. However, this book includes these areas and is essential for those majoring in applied superconductivity in electrical engineering. Recently, superconducting technology has made great progress. Many universities and companies are involved in applied superconductivity with the support of government. Over the next five years, departments of electrical engineering in universities and companies will become more involved in this area. This book will enable people to directly carry out research on applied superconductivity in electrical engineering. It is more comprehensive and practical when compared to other advances, presents a clear introduction to the application of superconductor in electrical engineering and related fundamental technologies, and arms readers with the technological aspects of superconductivity required to produce a machine. It covers power supplying technologies in superconducting electric apparatus. It is well organized and adaptable for students, lecturers, researchers, and engineers. Lecture slides suitable for lecturers are available on the Wiley Companion Website. **Fundamental Elements of Applied Superconductivity in Electrical Engineering** is ideal for academic researchers, graduates, and undergraduate students in electrical engineering. It is also an excellent reference work for superconducting device researchers and engineers.

V Hotine-Marussi Symposium on Mathematical Geodesy Fernando Sansò, 2013-03-09 Just as in the era of great achievements by scientists such as Newton and Gauss, the mathematical theory of geodesy is continuing the tradition of producing exciting theoretical results, but today the advances are due to the great technological push in the era of satellites for earth observations and large computers for calculations. Every four years a symposium on methodological matters documents this ongoing development in many related underlying areas such as estimation theory, stochastic modelling, inverse problems, and satellite positioning, global reference systems. This book presents developments in geodesy and related sciences, including applied mathematics, among which are many new results of high intellectual value to help readers stay on top of the latest happenings in the field.

Refereed and selected contributions from International Conference on Quark Nuclear Physics Charlotte Elster, Josef Speth, Thomas Walcher, 2013-06-29 The International Conference on Quark Nuclear Physics 2002 (QNP2002) was held in the Forschungszentrum Jülich from June 9 to 14, 2002. It was organized by the Institute of Nuclear Physics (IKP) at the Forschungszentrum Jülich together with the Universities of Bonn and Mainz. This meeting takes place every two years and was the successor to QNP2000 which was held in Adelaide. QNP2002 brought together about 200 scientists from 25 countries who met for their scientific work in the Forschungszentrum but spent their free time in the medieval city of Aachen, the former capital of Charles the Great. The particular feature of this conference is that it provides a comprehensive overview of the attempts in understanding hadrons and nuclei, including dense matter in terms of their fundamental constituents, the quarks and the gluons. One of the basic themes of the program was that fact that

we do have an underlying theory of strongly interacting particles namely the QCD For that reason the experimental topics covered during the meeting ranged from precision measurements with hadronic and electromagnetic probes to ultra relativistic heavy ion reactions Correspondingly the theoretical topics spanned an equally wide range including perturbative and lattice QCD calculations as well as effective theories and QCD motivated quark models In the morning sessions invited reviews were given In the afternoon twelve topical parallel sessions directed by conveners summarized the newest research results
