Physical Science Practical:

A Practical Guide to Data Analysis for Physical Science Students Louis Lyons,1991-11-29 It is usually straightforward to calculate the result of a practical experiment in the laboratory Estimating the accuracy of that result is often regarded by students as an obscure and tedious routine involving much arithmetic An estimate of the error is however an integral part of the presentation of the results of experiments This textbook is intended for undergraduates who are carrying out laboratory experiments in the physical sciences for the first time It is a practical guide on how to analyse data and estimate errors The necessary formulas for performing calculations are given and the ideas behind them are explained although this is not a formal text on statistics Specific examples are worked through step by step in the text Emphasis is placed on the need to think about whether a calculated error is sensible At first students should take this book with them to the laboratory and the format is intended to make this convenient The book will provide the necessary understanding of what is involved should inspire confidence in the method of estimating errors and enable numerical calculations without too much effort The author's aim is to make practical classes more enjoyable Students who use this book will be able to complete their calculations quickly and confidently leaving time to appreciate the basic physical ideas involved in the experiments School Science Practical

Chemical news and Journal of physical science ,1775 **Bulletin** United States. Office of Education,1915 **Bulletin** ,1915 The 4IR and teacher education in South Africa Felix Maringe,Otilia Chiramba,2024-02-26

The 4IR has become an overarching framework within which education systems including teacher education are operating Contingent upon the ideology of neo liberalism the 4IR seeks to transform societies in ways which respond to the relentless developments in technology the Internet and digital capacities which by design and intent are purposed at increasing both productivity and the associated quality while at the same time reducing human intervention in the same processes In teacher education how we teach and train student teachers will be substantially influenced by the imperatives of the 4IR There are multiple unresolved questions as the 4IR takes centre stage For example what will it mean for teaching and learning in schools that have severe technological and digital deficits for teachers and students who have minimal technological literacies for delivering high quality teaching and learning for transforming both the content and pedagogies of teacher education and above all for delivering socially just educational experiences for all our learners regardless of class race and privilege The discourse of the 4IR is contemporary and requires multiple perspectives to explore what it means in different contexts and settings the understandings it engenders in people what it implies across a wide range of educational decision making levels and that its fundamental assumptions cohere with national and societal assumptions about equality equity and social justice Multiple methodological approaches were utilised in the interrogation of the idea of the 4IR in teacher education in South Africa including theoretical empirical and small scale case studies amongst others The data these approaches provide are equally valued based on the purposes for which they have been derived

The Political Sciences Hugh Stretton,2013-04-15 Social science is a social activity as well as a method of discovery The researchers values and politics colour their work and so do their choices of scientific method This book is about both the technical effects of values and the political effects of technique The author reports what social scientists and historians actually do He sorts out the scientific from the political content in a wide range of old and new work in history sociology political science and economics The overall work is a detailed political and technical criticism of the scientific programme which would have researchers select for such qualities as objectivity uniformity and generality cumulation and professional unanimity
