Research in Education , 1973-12 **Activities in Science** , 1990 **Weaving Connections** David Selby, Tara Goldstein, 2000 Education plays a vitally important role in building foundations for social progress This remarkable collection describes educational models based on the principles of tolerance equity and justice developed over the past three decades by teachers parents activists and students In a time of crippling cutbacks and educational reforms designed to promote business over education this book is critical reading Contributors from across Canada discuss the initiatives behind their approaches how they developed curricula and the future of their educational work Weaving Connections is a call to action by progressive educators inviting us to cherish educational models that teach us how to live in harmony respect and balance with one another A Framework for K-12 Science Education National Research Council, Division of Behavioral and Social

Sciences and Education, Board on Science Education, Committee on a Conceptual Framework for New K-12 Science Education Standards, 2012-03-28 Science engineering and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States position in the global economy is declining in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and subsequently revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are crosscutting concepts that unify the study of science through their common application across science and engineering, scientific and engineering practices, and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences, and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
