

Physical Vs. Chemical Properties

A physical property is observed with the senses and can be determined without changing the object. Examples: color, shape, mass, length and more are all characteristics of physical properties.

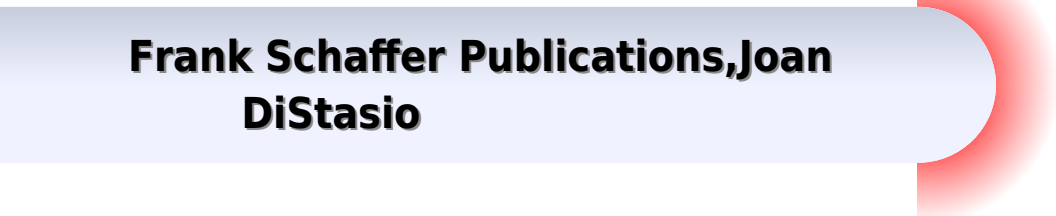

A chemical property indicates how a substance reacts with something else. The simplest example is flammability, a chemical property of substances. For example, the ability of wood to burn is a chemical property. The fact that wood reacts with oxygen, and the product is carbon dioxide, is a chemical reaction. The reaction is different substances with a different chemical formula: $\text{C}_6\text{H}_{10}\text{O}_5 + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$.

Identify the following properties as either chemical or physical by putting a check in the appropriate column.
