Introductory Physics for the Life Sciences: Mechanics (Volume One) David V. Guerra,2023-05-09 This textbook provides an accessible introduction to physics for undergraduate students in the life sciences including those majoring in all branches of biology biochemistry and psychology and students working on pre professional programs such as pre medical pre dental and physical therapy The text is geared for the algebra based physics course often named College Physics in the United States The order of topics studied are such that most of the problems in the text can be solved with the methods of Statics or Dynamics That is they require a free body diagram the application of Newton s Laws and any necessary kinematics Constructing the text with a standardized problem solving methodology simplifies this aspect of the course and allows students to focus on the application of physics to the study of biological systems Along the way students apply these techniques to find the tension in a tendon the sedimentation rate of red blood cells in haemoglobin the torques and forces on a bacterium employing a flagellum to propel itself through a viscous fluid and the terminal velocity of a protein moving in a Gel Electrophoresis device This is part one of a two volume set volume 2 introduces students to the conserved quantities and applies these problem solving techniques to topics in Thermodynamics Electrical Circuits Optics and Atomic and Nuclear Physics always with continued focus on biological applications Key Features Organised and centred around analysis techniques not traditional Mechanics and E M Presents a unified approach in a different order meaning that the same laboratories equipment and demonstrations can be used when teaching the course Demonstrates to students that the analysis and concepts they are learning are critical to the understanding of biological

Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
