Three marks questions & answers

1. Derive the expression for magnetic force in a current carrying conductor. $(4 \times 2 = 8)$
 Consider a rod of a uniform cross-sectional area A and length l put in the uniform density of charge carrier with the density n .
 Then the total number of mobile charge particles is nAl . Assume that these charge carriers are under motion with a drift velocity v_d .
 So the drift velocity is v_d . Hence in the drift of each charge carrier, production of an external magnetic field B . And this will induce change current in the current density j is equal

$$j = nqv_d$$

But j is the density current in the conductor. Then

$$F = BIl$$

2. Obtain the expression for radius of circular path considered by a charge in a magnetic field.

Assume that a charged particle of q is moving perpendicular to the uniform magnetic field B in xy plane. The charged particle moves with v with an external force. Then producing a uniform circular motion for the particle in a plane perpendicular to the field.

Let m and v be the mass and velocity of the particle. Then the radius of the circular path is

$$r = \frac{mv}{qB}$$

3. State and explain the Lorentz force.
