and practical challenges remain. Thus, through this special section, we propose to provide a foundation for a new era of prevention research in which the principles of prevention science are combined with genomic science. In the current special section, we will bring together authors to deal with genetic and epigenetically driven processes relevant to depression, substance abuse, and sexual risk taking. Together, they will comment on and provide data relevant to assessment, research, and statistical methods, development of biomarkers, and implementation strategies with disadvantaged and high-risk populations. The papers will help to inform the development of a new generation of prevention programs that go beyond universal programs and sensitively target key processes while providing greater precision regarding prediction of population-level impact.
