Instructional Block 1: Number System

Recommended Time: 7 weeks Start Date: August 24th

Estimated End Date: Oct. 12 Actual End Date: _____

Utah Core

1.1: Estimate and compute with integers; Estimate and compute with rational numbers.

- Compute fluently using all four operations with integers, and explain why the corresponding algorithms work.
- Compute fluently using all four operations with rational numbers, including negative fractions and decimals, and explain why the corresponding algorithms work.
- Check the reasonableness of results using estimation.

1.2: Analyze relationships of rational numbers and their operations.

- Order rational numbers in various forms, including scientific notation (positive and negative exponents), and place numbers on a number line.**
- Predict the effect of operating with fractions, decimals, percents, and integers as an increase or a decrease of the original value.
- Recognize and use the identity properties of addition and multiplication, the multiplicative property of zero, the commutative and associative properties of addition and multiplication, and the distributive property of multiplication over addition.
- Recognize and use the inverse operations of adding and subtracting a fixed number, multiplying and dividing by a fixed number, **and computing squares of whole numbers and taking square roots of perfect squares.**

1.3: Solve problems involving rational numbers.

- Recognize the absolute value of a rational number as its distance from zero.
- Simplify numerical expressions, including those with whole number exponents and absolute values, using the order of operations.
- Solve problems involving rational numbers, percents, and proportions.

Common Core

7.NS.1: Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.

- Describe situations in which opposite quantities combine to make 0. For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged.
- Understand $p + q$ as the number located a distance $|q|$ from p , in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts.
- Understand subtraction of rational numbers as adding the additive inverse, $p - q = p + (-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.
- Apply properties of operations as strategies to add and subtract rational numbers.

7.NS.2: Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.

- Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.
- Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts.
- Apply properties of operations as strategies to multiply and divide rational numbers.
- Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.

7.NS.3: Solve real-world and mathematical problems involving the four operations with rational numbers. Computations with rational numbers extend the rules for manipulating fractions to complex fractions.
