Neutrosophic Precalculus and Neutrosophic Calculus Florentin Smarandache,2015-06-15

Neutrosophic Analysis is a generalization of Set Analysis which in its turn is a generalization of Interval Analysis Neutrosophic Precalculus is referred to indeterminate staticity while Neutrosophic Calculus is the mathematics of indeterminate change The Neutrosophic Precalculus and Neutrosophic Calculus can be developed in many ways depending on the types of indeterminacy one has and on the methods used to deal with such indeterminacy In this book the author presents a few examples of indeterminacies and several methods to deal with these specific indeterminacies but many other indeterminacies there exist in our everyday life and they have to be studied and resolved using similar of different methods Therefore more research should to be done in the field of neutrosophics The author introduces for the first time the notions of neutrosophic mereo limit neutrosophic mereo continuity in a different way from the classical semi continuity neutrosophic mereo derivative and neutrosophic mereo integral both in different ways from the fractional calculus besides the classical definitions of limit continuity derivative and integral respectively Future research may be done in the neutrosophic fractional calculus It means that in neutrosophic calculus there are limits continuity derivatives and integrals that are not complete i e there are neutrosophic functions that at a given point may have a degree of a limit not 100% called mereo limit or may be continuous in a certain degree not 100% called mereo continuity or may be differentiable or integrable in a certain degree not 100% called mereo derivatives and respectively mereo integrals These occur because of indeterminacies
