estimate calories burnt per day The key objective is to provide better services to end users The objective of this book is to inform the reader of the methodologies and techniques for extracting meaningful information called semantics from sensors on our smartphones These techniques form the cornerstone of several application areas utilizing smartphone sensor data We discuss technical challenges and algorithmic solutions for modeling and mining knowledge from smartphone resident sensor data streams This book devotes two chapters to dive deep into a set of highly available commoditized sensors the positioning sensor GPS and motion sensor accelerometer Furthermore this book has a chapter devoted to energy efficient computation of semantics as battery life is a major concern on user experience **The International Conference on Health Informatics**
