However, millions of children face health inequities that compromise their development well-being and long-term outcomes despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. **Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity** builds upon and updates research from *Communities in Action: Pathways to Health Equity 2017* and *From Neurons to Neighborhoods: The Science of Early Childhood Development 2000*.
