climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description **This paper presents a data mining process of single valued neutrosophic information. This approach gives a presentation of data analysis common to all applications. Data mining depends on two main elements, namely the concept of similarity and the machine learning framework. Heilbron,2024-04-10 In 1927 Niels Bohr and

Albert Einstein began a debate about the interpretation and meaning of the new quantum theory. This would become one of the most famous debates in the history of science. At stake were an understanding of the purpose and defense of the integrity of science. What if any limits should we place on our expectations for what science can tell us about physical reality? Our protagonists slowly disappeared from the vanguard of physics as its centre of gravity shifted from a war-ravaged Continental Europe to a bold pragmatic post-war America. What Einstein and Bohr had considered to be matters of the utmost importance were now set aside. Their debate was regarded either as settled in Bohr's favour or as superfluous to real physics. But the debate was not resolved. The problems of interpretation and meaning persisted at least in the minds of a few stubborn physicists such as David Bohm and John Bell who refused to stop asking awkward questions. The Bohr-Einstein debate was rejoined now with a new set of protagonists on a small scale at first. Through their efforts the debate was revealed to be about physics after all. Their questions did indeed have answers that could be found in a laboratory. As quantum entanglement became a real physical phenomenon, whole new disciplines were established such as quantum computing, teleportation and cryptography. The efforts of the experimentalists were rewarded with shares in the 2022 Nobel prize in physics. As Quantum Drama reveals, science owes a large debt to those who kept the discussions going against the apathy and indifference of most physicists before definitive experimental inquiries became possible. Although experiment moved the Bohr-Einstein debate to a new level and drew many into foundational research, it has by no means removed or resolved the fundamental question. There will be no Nobel prize for an answer that will not shut off discussion. Our Drama will continue beyond our telling of it and is unlikely to reach its final scene before science ceases or the world ends.

Climate Change and the Humanities Alexander Elliott,James Cullis,Vinita Damodaran,2017-11-01 This volume of essays fills a lacunae in the current climate change debate by bringing new perspectives on the role of humanities scholars within this debate The humanities have historically played an important role in the various debates on environment climate and society The past two decades especially have seen a resurfacing of these environmental concerns across humanities disciplines in the wake of what has been termed climate change This book argues that these disciplines should be more confident and vocal in responding to climate change while questioning the way in which the climate change debate is currently being conducted in academic political and social arenas Addressing climate change through the varied approaches of the humanities means re thinking and re evaluating its fundamental assumptions and responses to perceived crisis through the lens of history philosophy and literature The volume aims thus to be a catalyst for emerging scholarship in this field and to appeal to an academic and popular readership

Options to Ensure the Climate Record from the NPOESS and GOES-R Spacecraft National Research

Council, Division on Engineering and Physical Sciences, Space Studies Board, Panel on Options to Ensure the Climate Record from the NPOESS and GOES-R Spacecraft, 2008-07-19 In 2000 the nation's next generation National Polar orbiting Operational Environmental Satellite System NPOESS program anticipated purchasing six satellites for 6.5 billion with a first launch in 2008. By November 2005 however it became apparent that NPOESS would overrun its cost estimates by at least 25 percent. In June 2006 the planned acquisition of six spacecraft was reduced to four; the launch of the first spacecraft was delayed until 2013 and several sensors were canceled or descoped in capability. To examine the impacts of these changes particularly those associated with climate research and ways to mitigate those impacts, NASA and NOAA asked the NRC to add this task to its ongoing decadal survey Earth Science and Applications from Space. The sponsors and the NRC agreed to address this task separately and to base its analysis on a major workshop. This book presents summaries of discussions at the workshop which included sessions on the measurements and sensors originally planned for NPOESS and GOES-R generation of climate data records, mitigation options including the role of international partners and cross-cutting issues.
