Corporate Power and Human Rights Manette Kaisershot, Nicholas Connolly, 2018-02-02 There is ample evidence about the negative effects business activity of all types can have on the provision of human rights Equally there can be little doubt economic development usually driven through business activity and trade is necessary for any state to provide the institutions and infrastructure necessary to secure and provide human rights for their citizens The United Nations and businesses recognise this tension and are collaborating to effect change in business behaviours through voluntary initiatives such as the Global Compact and John Ruggie s Guiding Principles Yet voluntary approaches are evidently failing to prevent human rights violations and there are few alternatives in law for affected communities to seek justice This book seeks to robustly challenge the current status quo of business approaches to human rights in order to develop meaningful alternatives in an attempt to breach the gap between the realities of business and human rights and its discourse This book was previously published as a special issue of the International Journal of Human Rights

This Is Going to Hurt: Weather Anomalies, Supply Chain Pressures and Inflation Mr. Serhan Cevik, Gyowon Gwon, 2024-04-05 As climate change

accelerates the frequency and severity of extreme weather events are expected to worsen and have greater adverse consequences for ecosystems physical infrastructure and economic activity across the world This paper investigates how weather anomalies affect global supply chains and inflation dynamics Using monthly data for six large and well diversified economies China the Euro area Japan Korea the United Kingdom and the United States over the period 1997 2021 we implement a structural vector autoregressive model and document that weather anomalies could disrupt supply chains and subsequently lead to inflationary pressures Our results based on high frequency data and robust to alternative estimation methodologies show that these effects vary across countries depending on the severity of weather shocks and vulnerability to supply chain disruptions The impact of weather shocks on supply chains and inflation dynamics is likely to become more pronounced with accelerating climate change that can have non linear effects These findings have important policy implications Central bankers should consider the impact of weather anomalies on supply chains and inflation dynamics to prevent entrenching second round effects and de anchoring of inflation expectations More directly however governments can invest more for climate change adaptation to strengthen critical infrastructure and thereby minimize supply chain disruptions
