Atomic, Molecular, and Optical Physics National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Board on Physics and Astronomy, Physics Survey Committee, Panel on Atomic, Molecular, and Optical Physics, 1986-02-01. The goals of atomic, molecular, and optical physics (AMO) physics are to elucidate the fundamental laws of physics to understand the structure of matter and how matter evolves at the atomic and molecular levels; to understand light in all its manifestations; and to create new techniques and devices. AMO physics provides theoretical and experimental methods and essential data to neighboring areas of science such as chemistry, astrophysics, condensed matter physics, plasma physics, surface science, biology, and medicine. It contributes to the national security system and to the nation's programs in fusion, directed energy, and materials research. Lasers and advanced technologies such as optical processing and laser isotope separation have been made possible by discoveries in AMO physics, and the research underlies new industries such as fiber optics, communications, and laser-assisted manufacturing. These developments are expected to help the nation to maintain its industrial competitiveness and its military strength in the years to come. This report describes the field, characterizes recent advances, and identifies current frontiers of research. The Journal of Physical Chemistry, 1900. Includes section New Books.
