

Fluids: The materials that can flow are called fluids. Liquid and gases are collectively known as fluids. Unlike a solid a fluid has no definite shape of its own.

Hydrostatics (Fluids statics): The study of fluids at rest is known as hydrostatics.

Hydrodynamics (Fluids dynamics): The study of fluids in motion is termed as hydrodynamics.

Density: Density of a substance is defined as the mass per unit volume of the substance.

$$\rho = \frac{M}{V}$$

SI unit of density is kgm^{-3} and dimensions are ML^{-3}

Relative density: It is defined as the ratio of the density of the substance to the density of water.

$$\text{Relative density} = \frac{\text{Density of the substance}}{\text{Density of the water}}$$

Relative density has no unit. It is a pure number.

Note: Density of water at 4°C is maximum and is equal to 1000kgm^{-3}

Pressure: The pressure is defined as the magnitude of the force acting perpendicular to the surface of an object per unit area of the object.

$$P = \frac{F}{A}$$

SI unit of pressure is Nm^{-2} or *pascal* (Pa). Dimensions of pressure is $ML^{-1}T^{-2}$

Note: Pressure is a scalar quantity, because hydrostatic pressure is transmitted equally in all directions, when force is applied, which shows that a definite direction is not associated with pressure.

Measurement of pressure: The normal force exerted by the fluid at a point may be measured and the arrangement is as shown.

It consists of an evacuated chamber with a spring that is calibrated to measure the force acting on the piston. This device is placed at a point inside the fluid. The inward force exerted by the fluid on the piston is balanced by the outward spring force and is thereby measured.

Pascal's Law: The pressure in a fluid at rest is same at all points if they are at the same height.

Pascal's Explanation:

Consider an element $ABC-DEH$ in the form of a right-angled prism in the fluid.

As the element is very small, every part of it is located at the same height from the liquid surface. Then the effect of gravity is same at all these points.

Let F_a , F_b and F_c be the normal forces exerted by the fluid on the faces $BEHC$, $ADHC$ and $ADEB$ respectively.

Let A_a , A_b and A_c be the area of the faces $BEHC$, $ADHC$ and $ADEB$ respectively.
