Q.1: Define waves.**Ans: Waves:**

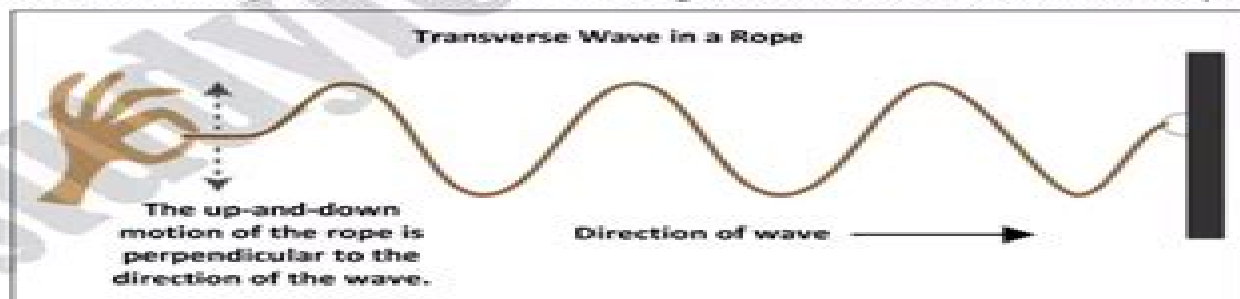

A method that transports energy from one point to another point without transfer of matter is called a wave. Waves are means of energy transfer without the transfer of matter. The wave is a disturbance in a medium that transfers energy from one place to another.

For example: A tide can travel many kilometers. The water moves up and down - a disturbance that travels in a wave, transferring energy, not matter.

Q.2: Describe the formation of waves.**Ans: Formation of Waves:**

Disturbance of medium forms waves. We can produce waves by using a rope, slinky spring, and water waves in ripple tanks.

(i) Wave Motion by using a Rope: We can produce waves on a rope by attaching one end to a wall and continuously moving the other end up and down, as shown in the given figure. These up-and-down movements produce oscillations or vibrations. We can observe that the generated rope waves travel towards the wall, whereas the rope itself moves only up and down. The rope is the medium through which the waves travel or propagate.

(ii) Waves in a Slinky Spring: A slinky spring is a pre-compressed helical or coiled spring. We can perform several experiments with a slinky in the laboratory to understand the phenomenon of different types of Wave motion. Attach one end of the spring with a wall.
