

# ANGLE MEASURES + SEGMENT LENGTHS

## THEOREM

The measure of an angle formed by two lines that intersect **inside** a circle is \_\_\_\_\_ the \_\_\_\_\_ of the measures of the intercepted arcs.

$$m\angle 1 = \frac{1}{2}(x + y)$$

## THEOREM

The measure of an angle formed by two lines that intersect **outside** a circle is \_\_\_\_\_ the \_\_\_\_\_ of the measures of the intercepted arcs.

$$m\angle 1 = \frac{1}{2}(x - y)$$

Carroll, Elyn Rykken, 2018-12-20 Geometry The Line and the Circle is an undergraduate text with a strong narrative that is written at the appropriate level of rigor for an upper level survey or axiomatic course in geometry Starting with Euclid's Elements the book connects topics in Euclidean and non Euclidean geometry in an intentional and meaningful way with historical context The line and the circle are the principal characters driving the narrative In every geometry considered which include spherical hyperbolic and taxicab as well as finite affine and projective geometries these two objects are analyzed and highlighted Along the way the reader contemplates fundamental questions such as What is a straight line What does parallel mean What is distance What is area There is a strong focus on axiomatic structures throughout the text While Euclid is a constant inspiration and the Elements is repeatedly revisited with substantial coverage of Books I II III IV and VI non Euclidean geometries are introduced very early to give the reader perspective on questions of axiomatics Rounding out the thorough coverage of axiomatics are concluding chapters on transformations and constructibility The book is compulsively readable with great attention paid to the historical narrative and hundreds of attractive problems [CliffsNotes GRE General Test Cram Plan 2nd Edition](#) Jane R. ### **Geometry Illuminated**

Matthew Harvey, 2015-09-25 Geometry Illuminated is an introduction to geometry in the plane both Euclidean and hyperbolic It is designed to be used in an undergraduate course on geometry and as such its target audience is undergraduate math majors However much of it should be readable by anyone who is comfortable with the language of mathematical proof Throughout the goal is to develop the material patiently One of the more appealing aspects of geometry is that it is a very visual subject This book hopes to take full advantage of that with an extensive use of illustrations as guides Geometry Illuminated is divided into four principal parts Part 1 develops neutral geometry in the style of Hilbert including a discussion of the construction of measure in that system ultimately building up to the Saccheri Legendre Theorem Part 2 provides a glimpse of classical Euclidean geometry with an emphasis on concurrence results such as the nine point circle Part 3 studies transformations of the Euclidean plane beginning with isometries and ending with inversion with applications and a discussion of area in between Part 4 is dedicated to the development of the Poincaré disk model and the study of geometry within that model While this material is traditional Geometry Illuminated does bring together topics that are generally not found in a book at this level Most notably it explicitly computes parametric equations for the pseudosphere and its geodesics It focuses less on the nature of axiomatic systems for geometry but emphasizes rather the logical development of geometry within such a system It also includes sections dealing with trilinear and barycentric coordinates theorems that can be proved using inversion and Euclidean and hyperbolic tilings
