An elderly client with a fractured left hip is on strict bedrest. Which nursing measure is essential to the client's nursing care?

- A. Massage any reddened areas for at least five minutes.
- B. Encourage active range of motion exercises on extremities.
- C. Position the client laterally, prone, and dorsally in sequence.
- D. Gently lift the client when moving into a desired position. - D. Gently lift the client when moving into a desired position.

To avoid shearing forces when repositioning, the client should be lifted gently across a surface (D). Reddened areas should not be massaged (A) since this may increase the damage to already traumatized skin. To control pain and muscle spasms, active range of motion (B) may be limited on the affected leg. The position described in (C) is contraindicated for a client with a fractured left hip.

The nurse is administering medications through a nasogastric tube (NGT) which is connected to suction. After ensuring correct tube placement, what action should the nurse take next?

- A. Clamp the tube for 20 minutes.
- B. Flush the tube with water.
- C. Administer the medications as prescribed.
- D. Crush the tablets and dissolve in sterile water. - B. Flush the tube with water.

The NGT should be flushed before, after and in between each medication administered (B). Once all medications are administered, the NGT should be clamped for 20 minutes (A). (C and D) may be implemented only after the tubing has been flushed.

A client who is in hospice care complains of increasing amounts of pain. The healthcare provider prescribes an analgesic every four hours as needed. Which action should the nurse implement?
