Mehling,Olga Pollatos,2017-02-07 There is an emergent movement of scientists and scholars working on somatic awareness interoception and embodiment This work cuts across studies of neurophysiology somatic anthropology contemplative practice and mind body medicine Key questions include How is body awareness cultivated What role does interoception play for emotion and cognition in healthy adults and children as well as in different psychopathologies What are the neurophysiological effects of this cultivation in practices such as Yoga mindfulness meditation Tai Chi and other embodied contemplative practices What categories from other traditions might be useful as we explore embodiment Does the cultivation of body awareness within contemplative practice offer a tool for coping with suffering from conditions such as pain addiction and dysregulated emotion This emergent field of research into somatic awareness and associated interoceptive processes however faces many obstacles The principle obstacle lies in our 400 year Cartesian tradition that views sensory perception as epiphenomenal to cognition The segregation of perception and cognition has enabled a broad program of cognitive science research but may have also prevented researchers from developing paradigms for understanding how interoceptive awareness of sensations from inside the body influences cognition The cognitive representation of interoceptive signals may play an active role in facilitating therapeutic transformation e g by altering context in which cognitive appraisals of well being occur This topic has ramifications into disparate research fields What is the role of interoceptive awareness in conscious presence How do we distinguish between adaptive and maladaptive somatic awareness How do we best measure somatic awareness What are the consequences of dysregulated somatic interoceptive awareness on cognition emotion and behavior The complexity of these questions calls for the creative integration of perspectives and findings from related but often disparate research areas including clinical research neuroscience cognitive psychology anthropology religious contemplative studies and philosophy *The Philosophy of Psychiatry and Biologism* Markus R  ther,Bettina Schoene-Seifert,Marco Stier,Sebastian Muders,2014-12-03 There has been

an ongoing debate about the capabilities and limits of the bio natural sciences as sources and the methodological measure in the philosophy of psychiatry for quite some time now Still many problems remain unsolved at least partly for the following reasons The opposing parties do not tend to speak with each other exchange their arguments and try to increase mutual understanding Rather one gets the impression that they often remain in their trenches busy with confirming each others opinions and developing their positions in isolation This leads to several shortcomings 1 Good arguments and insights from both sides of the debate get less attention they deserve 2 The further improvement of each position becomes harder without criticism genuinely motivated by the opposing standpoint 3 The debate is not going to stop at least not in the way it would finish after a suggested solution finds broad support 4 Related to this insisting on the ultimate aptness of one side is just plainly wrong in almost every case Since undeniably most philosophical positions usually have a grain of truth hidden in them In sum many controversies persist with regard to the appropriate methodological epistemological and even ontological level for psychiatric explanation and therapies In a conference which took place in December last year we tried to contribute to a better understanding about what really is at issue in the philosophy of psychiatry We asked for a common basis for several sides for points of divergence and for the practical impact of different solutions on everyday work in psychiatry Since psychiatry as a whole is a subject that is too wide to be covered in a single meeting we focused on the following four core topics 1 Competing accounts of psychiatric biologism reductionism and physicalism 2 Mental disease and brain disease in the light of current neuroscientific and epigenetic findings 3 Normative suppositions for different accounts of mental disease 4 Normative implications of different accounts of mental disease These topics which have been vigorously as well as fruitfully discussed at our conference will ideally be too in the center of our contribution to Frontiers More precisely we think of arranging a research topic which assembles the issues of the conference At this point it seems promising to us to group three or four Target Articles TA and let them get criticized by a couple of commentaries from different angles to give the issue a much broader and detailed perspective *List of Journals Indexed in Index Medicus* National Library of Medicine (U.S.), 1985 Issues for 1977 1979 include also Special List journals being indexed in cooperation with other institutions Citations from these journals appear in other MEDLARS bibliographies and in MEDLINE but not in Index Medicus
