Accelerating to 2030 - Doubling Down on HIV Prevention to End HIV/AIDS as a Public Health Threat Kenneth Ngure, Robyn Eakle, Jason Bailey Reed, Kimberly Green, Nittaya Phanuphak, Gaston Djomand, Mollie Lane, 2025-10-06 Background Despite significant progress toward 95-95-95 milestones 2022 HIV incidence estimates remained well above targets specified by UNAIDS underscoring broad unmet needs for primary HIV prevention Scale up of prevention strategies to date has yielded mixed results with the most notable and significant missed opportunities in oral pre-exposure prophylaxis PrEP HIV oral PrEP is safe and up to 99% effective when taken as directed but remains inaccessible and/or underutilized by most While HIV programming must continue to guarantee diagnosis and treatment services for all in need sustainable investments in primary prevention despite financing constraints are critical to close remaining epidemic control gaps Goal Identical to diagnosis treatment and viral suppression targets UNAIDS specifies that 95% of people at risk of HIV must access effective HIV combination prevention options This collection intends to curate policy and programming best practices and innovations that improve and measure the effectiveness of prevention method use coverage and impact particularly as the PrEP method mix expands to include longer acting formulations and a more comprehensive range of delivery models Increasing the evidence base is intended to improve implementation efficiencies and compel policy changes conducive to sustainable adaptable and agile programming all within the context of universal health coverage and integrated people centered care to meet the present imperative for primary prevention Most importantly evidence is needed to articulate the why and the how of investing in sustainable community driven and led HIV prevention programming to preserve the gains made in the epidemic HIV prevention has been vastly under resourced and investments must be grown to accomplish overall goals

Structural Dynamics of HIV Deanna Kerrigan, Clare Barrington, 2017-09-30 This book examines the structural dynamics of HIV among populations at heightened vulnerability to infection as the result of stigma discrimination and marginalization It first

examines how the socio structural context shapes HIV risk and how affected populations and national governments and programs have responded to these structural constraints Chapters focus on structural determinants of HIV risk among transgender women in Guatemala migrant workers in Mexico Nigeria and Vietnam and people who inject drugs in Tanzania Next the book examines resilience and community empowerment and mobilization among key populations such as female sex workers in the Dominican Republic and India and young women and girls in Botswana Malawi and Mozambique A third set of chapters explores how national responses to HIV have addressed the role of structural factors in diverse political geographic and epidemic settings including Brazil South Africa Ukraine and the USA Ultimately effective and sustainable responses to HIV among marginalized groups must be grounded in an in depth understanding of the factors that create vulnerability and risk and impede access to services Throughout this book brings together a rigorous social science research perspective with a strong rights based approach to inform improvements in HIV programs and policies It offers new insights into how to better address HIV and the health and human rights of historically excluded communities and groups

Disclosure Within HIV-Affected Families Grace Gachanja, Gary J. Burkholder, Aimee Ferraro, 2018-08-29 While HIV AIDS is a global public health challenge its impact is arguably greatest in the Sub Saharan Africa SSA where new infections account for approximately 66% of the total number of HIV positive persons globally In SSA medical social and economic resources are limited thus necessitating innovative approaches to disease prevention One of the mechanisms of prevention that is most promising occurs through HIV disclosure to family members e g adult sexual partners generally and to children in particular Our emphasis in this eBook is on HIV disclosure to children because it has multiple benefits including improved adherence to antiretroviral medication treatment and understanding at an early age of the impact of sexual activity on the spread of HIV While there is a noticeable gap in research on HIV disclosure to younger children some of the general reasons for non disclosure include concerns about fear of adult partners leaving relationships and that children are too young to comprehend the severity of the situation and may tell others outside the family Thus it is critical to better understand how the HIV disclosure process happens or does not happen within HIV affected families as well as the best practices on how to disclose In this eBook we present a combination of empirical research studies and critical literature reviews that investigate the reasons for and for not disclosing HIV status within HIV affected families and provide evidence based practices that could be adopted by healthcare professionals to help HIV positive parents facilitate disclosure activities within these families This information can also be used by researchers practitioners and stakeholders who are in a position to influence policies on effective HIV disclosure practices guidelines and programs

Biomarkers in Drug Hypersensitivity José A. G. Agúndez, Silvia Selinski, Emanuela Corsini, Klaus Golka, Elena García-Martín, 2017-07-25 Biomarkers especially those based on pharmacogenomics testing have proved to be extremely useful for type A adverse drug reactions Clinical practice guidelines based on biomarker testing are presently being developed and updated for type A adverse drug reactions In contrast little

attention has been paid to the potential use of biomarkers in type B adverse reactions characterized by the occurrence of reactions not directly related to the pharmacological properties of the drug Drug induced hypersensitivity belongs to those type B reactions Drug induced hypersensitivity reactions involve complex mechanisms that include among others the metabolic activation and haptization of drug metabolites Hence factors that influence the pharmacokinetics of drug and metabolites may contribute to the development of some drug induced hypersensitivity reactions This implies that processes such as ADME absorption distribution metabolism and excretion that are typically involved in type A adverse drug reactions may have a role in hypersensitivity reactions too In addition to metabolic activation several signal transduction pathways participate and modulate the development and the clinical presentation of drug hypersensitivity The diverse mechanisms underlying such drug hypersensitivity reactions lead to four major groups of reactions according to the Gell and Coombs classification immediate cytotoxic immune complex and delayed The enormous complexity of drug hypersensitivity reactions is a consequence of the variety of mechanisms involved which may be related among others to drug metabolism generation of antigenic signals stimulation and maturation of dendritic cells presentation of haptens and mechanisms of cytotoxicity In addition a plethora of possible clinical presentations exists including urticaria angioedema anaphylaxis cytopenias nephritis serum sickness vasculitis contact dermatitis drug rash eosinophilia and systemic symptoms Stevens Johnson syndrome toxic epidermal necrolysis and acute generalized exanthematous pustulosis The rapid progress in the field in recent years indicates that the combination of several disciplines is essential to understand the mechanisms involved in this particular and not completely understood type of adverse drug reactions The objective of this Research Topic is to present insights obtained from both basic and clinical scientists which may include studies related to the identification validation refinement and clinical implementation of biomarkers for drug induced hypersensitivity The Topic aims to include recent findings related but not limited to potential phenomic genomic proteomic metabolomic and signal transduction biomarkers These biomarkers could eventually be used in clinical practice and or these might contribute as a proof of concept to our understanding of the complex events leading to drug hypersensitivity reactions In addition the Topic will cover recent developments and methodological advances in the diagnosis prevention and therapeutic management of drug induced hypersensitivity
