

Quadratic Equations

A **quadratic equation** is a quadratic expression that is equal to something.

Quadratic equations contain terms up to x^2 – the highest power for a quadratic equation is 2

 Examples

$$x^2 = 5$$

$$x^2 - 2x + 1 = 0$$

$$x^2 - 16 = 0$$

$$2 = 2x^2 + 3x$$

To solve a quadratic equation, we must set it equal to 0

A quadratic equation can have zero, one or two (real) solutions.

Practical Optimization Philip E. Gill, Walter Murray, Margaret H. Wright, 2019-12-16 In the intervening years since this book was published in 1981 the field of optimization has been exceptionally lively This fertility has involved not only progress in theory but also faster numerical algorithms and extensions into unexpected or previously unknown areas such as semidefinite programming Despite these changes many of the important principles and much of the intuition can be found in this Classics version of Practical Optimization This book provides model algorithms and pseudocode useful tools for users who prefer to write their own code as well as for those who want to understand externally provided code It presents algorithms in a step by step format revealing the overall structure of the underlying procedures and thereby allowing a high level perspective on the fundamental differences And it contains a wealth of techniques and strategies that are well suited for optimization in the twenty first century and particularly in the now flourishing fields of data science big data and machine learning Practical Optimization is appropriate for advanced undergraduates graduate students and researchers interested in methods for solving optimization problems

Teaching and Learning High School Mathematics Charlene E. Beckmann, Denise R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and

mathematics pedagogy i.e. teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1.1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans
