SUMMARY

Surface-guided radiation therapy (SGRT) has gained wide popularity across radiation oncology community due to its non-radiographic characteristic and real-time motion monitoring capability. Nevertheless, it has not yet gained its full potential in routine clinical practice. Implementing SGRT system into the clinical practice requires not only the definition of steps in clinical workflow, but also establishment of the comprehensive quality assurance (QA) program including commissioning, acceptance and periodic QA test to facilitate a safe, and efficient use of SGRT system in clinical settings. This review focuses on the latest recommendation of American Association of Physicists in Medicine and European Society for Radiotherapy and Oncology guidelines about the implementation of comprehensive QA program for SGRT system.

INTRODUCTION

Surface-guided radiation therapy (SGRT) has emerged as a special form of image-guided radiation therapy (IGRT). Since its first introduction as a useful IGRT tool, many researcher have explored the feasibility of SGRT system for patient positioning, real-time motion management, four-dimensional imaging for motion tracking and threshold gating.[1-8] In several studies, it was proved to improve initial patient positioning by correcting posture differences before online imaging.[9,10] Nevertheless, after initial patient setup with SGRT, online imaging modalities such as planar imaging (kV or MV) and cone-beam computed tomography still needs to be performed in many anatomical sites especially located in thorax and abdomen since the changes in internal motion remain undetected through surface scanning with current technology.[9] However, up to that time, limited guidelines and the complexity of the clinical settings

have led to diverse patterns of practice between the clinics. In 2019, Padilla et al.[11] conducted an electronic survey under the auspices of American Association of Physicists in Medicine (AAPM) Task Group Report 302 (TG-302) to identify the necessity of formal guidance and to gain more insight on prevalence of the SGRT system in USA, length of its use, existing recommendation for commissioning procedures and clinical implementation. According to questionnaire, 36% of the users (n=86) only followed the vendor's guidelines and 49.1% of the respondents (n=115) used more than one reference during commissioning. In terms of the question about the use of any end-to-end (E2E) test verification approaches, 12% of the users (n=28) response this question as "No" and 14.1% of the respondents (n=33) do not know whether they performed any E2E test, or not. Similarly, in 2022, another international survey was conducted with the collaboration of European Society for Radiotherapy and Oncology (ESTRO) and AAPM to provide an
