Quest Rotational Dynamics:

Hydrodynamics Harry Schulz, André Simoes, Raquel Lobosco, 2011-12-22 The phenomena related to the flow of fluids are generally complex and difficult to quantify New approaches considering points of view still not explored may introduce useful tools in the study of Hydrodynamics and the related transport phenomena The details of the flows and the properties of the fluids must be considered on a very small scale perspective Consequently new concepts and tools are generated to better describe the fluids and their properties This volume presents conclusions about advanced topics of calculated and observed flows It contains eighteen chapters organized in five sections 1 Mathematical Models in Fluid Mechanics 2 Biological Applications and Biohydrodynamics 3 Detailed Experimental Analyses of Fluids and Flows 4 Radiation Electro Magnetohydrodynamics and Magnetorheology 5 Special Topics on Simulations and Experimental Data These chapters present new points of view about methods and tools used in Hydrodynamics

Cold and Ultracold Molecules Philip Earis, 2009 There have been enormous recent advances in our ability to produce and trap samples of translationally cold molecules below 1 K and ultracold molecules

below 1 mK Molecules such as NH_3 OH and NH have been cooled from room temperature to the milliKelvin regime by a variety of methods including buffer gas cooling and Stark deceleration Molecules have also been produced in ultracold atomic gases by photoassociation and magnetoassociation of pairs of atoms Bose Einstein condensates have been produced for dimers of both bosonic and fermionic alkali metal atoms and the first signatures of ultracold triatomic and tetraatomic molecules have been observed The new capabilities open up many exciting prospects including the study of collision processes in unprecedented detail using cooled or velocity controlled species the use of cold molecules in high precision measurement to observe fundamentally important quantities the production of quantum gases of dipolar molecules which would exhibit many new properties the use of cold molecules as qubits in quantum computing and controlled ultracold chemistry in which controlled chemical changes are achieved coherently for large samples using external fields
