Catalysis with Earth-abundant Elements Uwe Schneider, Stephen Thomas, 2020-10-28 Catalysis remains a key technology in a huge number of industrial processes in the 21st century The catalytic properties of precious metals such as platinum and palladium are well understood However these metals are expensive and their supply is limited Earth abundant elements such as iron and nickel are as the name suggests in plentiful supply and much cheaper to use but research on their use in catalysis has historically lagged behind As researchers and companies increasingly look for ways to

reduce costs and improve the sustainability of their processes there has been a renewed interest in these earth abundant elements This book presents a detailed overview of current research on the catalytic uses of the most Earth abundant elements Highlighting the top ten most Earth abundant elements and their various roles in modern synthetic chemistry s block metals Na K Mg Ca first row transition metals Ti Mn Fe and p block elements Al Si P The significant stoichiometric use of these elements and their use as acid base dual and or redox catalysts will be discussed It will be of use to industrial and academic researchers as well as graduate students with an interest in catalysis and sustainability
