

Installing and Configuring the Quantum Tenor DX Gateway

Introduction

The **Tenor DX** is a modular T1 digital gateway used in NetVanta Unified Communications Server installations to provide a gateway between internal (SIP) phone calls and the outside phone network (PSTN). Voice communications from an internal phone have voice over IP (VoIP) signals converted into digital TDM voice, which are transmitted over the PSTN.

A gateway works in conjunction with the UC server's SIP Proxy and SIP. All telephony services are provided through the mutual cooperation of SIP gateways, SIP telephones, SIP proxy and the Core Application Service.

The following diagram illustrates the UC server SIP architecture and its relationship with other components in a typical customer network.
