In Docker Containers Christopher Negus helps you master Docker containerization from the ground up. You'll start out running a few Docker container images in Ubuntu, Fedora, RHEL, CoreOS, or Project Atomic. By the time you've finished, you'll be deploying enterprise quality multi-container Kubernetes setups in modern Linux and cloud environments. Writing for system administrators, software developers, and technology enthusiasts, Negus touches on every aspect of working with Docker: setting up containerized applications, working with both individual and multiple containers, running containers in cloud environments, and developing containers. Teaching through realistic examples of desktop applications, system services, and games, Negus guides you through building and deploying your own Dockerized applications. As you build your expertise, you'll also learn indispensable Docker best practices for building and integrating containers, managing Docker on a day-to-day basis, and much more.

Understanding what Docker is and what you can do with it
Installing Docker on standard Linux or specialized container operating systems such as Atomic Host and CoreOS
Setting up a container runtime environment and private Docker Registry
Creating, running, and investigating Docker images and containers
Finding, pulling, saving, loading, and tagging container images
Pulling and pushing containers between local systems and Docker Registries
Integrating Docker containers with host networking and storage
Building containers with the `docker build` command and Dockerfile files
Minimizing space consumption and erasing unneeded containers
Accessing special host privileges from within a container
Orchestrating multiple containers into complex applications with Kubernetes
Using super-privileged containers in cloud environments
Managing containers in the cloud with Cockpit
Getting started with Docker container development
Learning container build techniques from shared Dockerfiles
