

# GETTING STARTED WITH PYTHON USING WINDOWS

August 31, 2018

Python is a programming language, and you'll be writing your Python code in the programming environment called Spyder. The Anaconda distribution simplifies the installation process by including Python, Spyder, and other packages and tools in one installation file.

## Installing Anaconda

1. Go to <https://www.anaconda.com/download/#download>
2. Scroll down to find your operating system and click on Python 3.6 to download the graphical installer.
  - a. For windows, see <http://windows.microsoft.com/en-us/windows/32-bit-and-64-bit-windows> to find out whether your computer has a 32-bit or 64-bit version of windows. Click on the FAQ “How can I tell if my computer is running a 32-bit or 64-bit version of windows?”, and follow the instructions to find out. If your computer is running a 32-bit version of Windows, click on “Windows 32-bit Python 3.4 Graphical Installer” under OTHER INSTALLERS, instead of the Windows 64-bit installer, and follow the same directions to install it. Actually, any Python 3.x version from Anaconda should work for this course. Python 2.x will not work for any version x.
3. Save the file to your computer.
4. Double click on the downloaded file to open it.
5. Follow the on-screen installation instructions, leaving options as they are currently set. This finishes the installation process.
6. **(OPTIONAL)** Next, check for any updates using Conda. Conda is one of the extras that is installed through the distribution Anaconda. It handles things like updates, set-up, and package installation through a command line interface. If there are many updates this can take 10 minutes or more. It is rare that you will have to use it.
