more effective more efficient and greener global construction industry The research based book commences with an

evaluation of eight methodologies identified after a worldwide literature and compliance review It is followed by a more

detailed report on four of these options with the ultimate objective of independent selection within the construction

engineering community of a single most appropriate methodology as the approach for further more detailed investigation

The eight methodologies were selected against six key performance indicators developed as assessment criteria and include

knowledge management lean construction construction contract procurement practices optimal work duration on site

construction site waste rationalization of construction safety regulations sustainable construction labor force and portfolio

geotechnical laboratory analytical delivery and economic models as the project is developed from planning to construction

This book explores the use and limitations of these earthwork models to be understood and appropriately applied This book

evolved from an earthworks course to practicing engineers over a 10 year period Theory alone is not enough Experience

alone without relating back to theory can sometimes be misleading if transferred without understanding the fundamentals

Mixture proportioning and quality control are discussed and a comprehensive listing of references is included. Many aspects of RCC in dams have become better understood since the publication of Bulletin No 126 and the present Bulletin contains less information on the particular approaches applied in different countries but includes more comprehensive information particularly in relation to design mixture proportioning and construction. With greater understanding it has further been possible to highlight more definitively the requirements of successful RCC dams as well as the pitfalls and difficulties that can be associated with RCC dam design and construction. Le Bulletin CIGB 177 intitulé Barrages en B ton Compact au Rouleau présente les dernières avancées en matière de technologie du b ton compact au rouleau pour les barrages intégrant les progrès de la technologie BCR pour les barrages au cours des 15 dernières années depuis que le dernier bulletin sur le sujet a été publié en 2003. Par conséquent le bulletin 177 remplace le bulletin 126 Barrages en b ton compact au rouleau. Technique actuelle et exemples publiés en 2003 et le bulletin 75 B ton compact au rouleau pour barrages poids. Technique actuelle publiée en 1989. Alors que la technologie du BCR pourrait encore être considérée comme une nouvelle technologie en 2003 il est maintenant vrai de dire que la construction par le compactage par rouleaux est devenue l'approche standard pour les grands barrages poids en b ton. Ce bulletin aborde tous les aspects de la planification de la conception de la construction et de la performance du BCR dans les barrages. Le dosage du mélange et le contrôle de la qualité sont discutés et une liste exhaustive des références est incluse. De nombreux aspects du BCR dans les barrages sont mieux compris depuis la publication du Bulletin no 126. Le présent bulletin contient moins d'informations sur les approches particulières appliquées dans différents pays mais comprend des informations plus complètes notamment en ce qui concerne la conception le dosage du mélange et la construction. Avec une plus grande compréhension il est possible de mettre en évidence les exigences des barrages en BCR russes ainsi que les pièges et les difficultés qui peuvent être associés à la conception et la construction du barrage en BCR.

Materials and resources are being depleted at an accelerating speed and rising consumption trends across the globe have placed material efficiency waste reduction and recycling at the centre of many

government policy agendas giving them an unprecedented urgency While there has been a considerable literature addressing consumption and waste reduction from different disciplinary perspectives the complex nature of the problem requires an increasing degree of interdisciplinarity Resource recovery and the optimisation of material flow can only be achieved alongside and through behaviour change to reduce the creation of material waste and wasteful consumption This book aims to develop a more robust understanding of the links between lifestyle consumption technologies and urban development
