Comprehensive Systems Biomedicine Pietro Lio,Enrico Capobianco,2014-12-03 Systems Biomedicine is a field in perpetual development By definition a translational discipline it emphasizes the role of quantitative systems approaches in biomedicine and aims to offer solutions to many emerging problems characterized by levels and types of complexity and uncertainty unmet before Many factors including technological and societal ones need to be considered In particular new technologies are providing researchers with the data deluge whose management and exploitation requires a reinvention of cross disciplinary team efforts The advent of omics and high content imaging are examples of advances de facto establishing the necessity of systems approaches Hypothesis driven models and in silico validation tools in support to all the varieties of experimental applications call for a profound revision The focus on phases like mining and assimilating the data has substantially increased so to allow for interpretable knowledge to be inferred Notably to be able to tackle the newly generated data dimensionality heterogeneity and complexity model free and data driven intensive applications are increasingly shaping the computational pipelines and architectures that quant specialists set aside of the high throughput genomics transcriptomics proteomics platforms As for the societal aspects in many advanced societies health care needs now more than in the past to address the problem of managing ageing populations and their complex morbidity patterns In parallel there is a growing research interest on the impact that cross

disciplinary clinical epidemiological and quantitative modelling studies can have in relation to outcomes potentially affecting the quality of life of many people Complex systems including those characterizing biomedicine are assessed in both their functionality and stability and also relatively to the capacity of generating information from diversity variation and complexity Due to the combined interactions and effects such systems embed prediction power available for instance in both target identification or marker discovery or more generally for conducting inference about patients pathological states i e normal versus disease diagnostic or prognostic analysis and preventive assessment e g risk evaluation The ultimate goal personalized medicine will be achieved based on the confluence of the system s predictive power to patient specific profiling

Education in Nigeria Daniel A. Nomishan,2014-12-26 This book Education in Nigeria Reflections and Global Perspectives provides a broad overview of education in Nigeria It recognizes the vital role education plays in the development of Nigeria and has attempted to air the concerns and call of the Nigerian public as well as educators for reform in the educational system in Nigeria The book further recognizes that Nigerian education continues to be evolved first into a system of Western European education and then into a global system of education It attempts to examine the status of education in Nigeria and thereby seeks solutions by exploring Nigeria s and global historical perspectives current trends and future directions regarding students and learning teachers and teaching the school curriculum and administration of schools It is expected that the comprehensive nature of the text will be beneficial to individuals in teacher preparation programs as well as those who plan to work with children in pre kindergarten nursery through secondary settings The chapter content of the book focuses on the variation of thought as to the principal objectives of educators to help students in Nigeria develop habits skills and ideas and help them to think It adds to the importance of providing education to all especially at the time when Nigeria is frankly making an effort to affirm democracy For any nation to be truly democratic it must maintain an educated electorate Education prepares people to make informed decisions that affect the society All children in Nigeria should therefore receive an education to prepare them to become effective members of the world society This book seeks to examine and reflect on education in Nigeria and globally

Making Sense of Learning Norman Reid,Asma Amanat Ali,2020-08-25 This textbook brings together findings from global research on teaching and learning with an emphasis on secondary and higher education The book is unique in that the content is selected in an original way and its presentation reflects the most recent research evidence related to understanding The book covers and presents themes that are based tightly on worldwide research evidence scrupulously avoiding opinion or any dependence on the personal experience of the authors The book starts by reflecting on educational research itself The four chapters that follow relate the story of the research that shows how all humans learn and the variations within that framework These chapters offer a tight framework

that underpins much of the rest of the text The next four chapters look at the way school curricula are organised and how the performance of learners can be assessed They summarise the research evidence related to thinking skills and consider the importance of practical teaching This is followed by two chapters that draw from the extensive social psychology research on attitude development as it applies in education and then by two chapters that summarise the research related to major issues of controversy the performativity agenda and the issue of quality One chapter looks at the place of statistics in education The next two chapters look at the evidence that can support or undermine many typical education beliefs or myths and mirages Finally the last chapter brings it all together and looks into the future pointing to some areas where future research is likely to be helpful based on current knowledge

Theory and Empirical Practice in Research on Social and Emotional Skills Miloš Kankaraš,Filip De Fruyt,Ricardo Primi,2022-09-22

Cancer, Radiation Therapy, and the Market Barbara Bridgman Perkins,2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers staggering high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and the Market shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health care systems
