Analytic Research Foundations for the Next-Generation Electric Grid National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-05-15. Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids. However, the grid that was developed in the 20th century and the incremental improvements made since then, including its underlying analytic foundations, is no longer adequate to completely meet the needs of the 21st century. The next generation electric grid must be more flexible and resilient. While fossil fuels will have their place for decades to come, the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics. Achieving this grid of the future will require effort on several fronts. There is a need for continued shorter term engineering research and development building on the existing analytic foundations for the grid. But there is also a need for more fundamental research to expand these analytic foundations. Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in mathematical and computational sciences that is needed for the next generation grid. It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation's research and development infrastructure the tools it needs to effectively develop, test and use this research. *ICPMG2014 - Physical Modelling in*

Beysens,Jack J.W. A. van Loon,2022-09-01 This book has been prepared under the auspice of the European Low Gravity Research Association ELGRA The main task of ELGRA is to foster the scientific community in Europe and beyond in conducting gravity and space related research This publication is dedicated to the science community and especially to the next generation of scientists and engineers interested in space research and in the means to use Earth to reproduce the space environment ELGRA provides a comprehensive description of space conditions and the means that have been developed on Earth to perform space environmental and micro gravity related research The book covers ground based research instruments and environments for both life and physical sciences research It discusses the opportunities and limitations of protocols and instruments to compensate gravity or simulate microgravity such as clinostats random positioning machines levitating magnets electric fields vibrations tail suspension or head down tilt as well as centrifuges for hyper g studies Other space environmental conditions are addressed too like cosmic radiation or Mars atmospheric and soil properties to be replicated and simulated on Earth Future long duration of manned missions personal well being and crew interaction are major issues dealt with Cancer, Radiation Therapy, and the Market Barbara Bridgman Perkins,2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers staggeringly high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and the Market shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization

and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health care systems
