Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on

test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8. Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end of course tests as well as alternative measures such as portfolios, exhibitions and student learning objectives. In each case issues related to design and development, psychometric considerations and validity challenges are covered from both a generic and a content specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field. The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license.

Decoloniality, Language and Literacy Carolyn McKinney, Pam Christie, 2021-12-20. Through a range of unconventional genres, representations of data and dialogic reflective narratives alongside more traditional academic genres, this book engages with contexts of decoloniality and border thinking in the Global South. It addresses processes of knowledge production and participation in the highly divided and unequal schooling and higher education system in South Africa and highlights the consequences of the monolingual myth in post colonial education, demonstrating opportunities for learning provided by translanguaging. It explores both embodied multimodal and multilingual instances of knowledge making in teaching and teacher education that take place outside but alongside formal classroom lecture and seminar modes and the positionality and learning experiences of teacher educators in science literacy and language across the curriculum. The book is not only transdisciplinary but also captures the learning that takes place beyond the borders of disciplines and formal classroom spaces.
