Remote Sensing of Above Ground Biomass Lalit Kumar, Onesimo Mutanga, 2019-08-20 Above ground biomass has been listed by the Intergovernmental Panel on Climate Change as one of the five most prominent visible and dynamic terrestrial carbon pools The increased awareness of the impacts of climate change has seen a burgeoning need to consistently assess carbon stocks to combat carbon sequestration An accurate estimation of carbon stocks and an understanding of the carbon sources and sinks can aid the improvement and accuracy of carbon flux models an important pre requisite of climate change impact projections Based on 15 research topics this book demonstrates the role of remote sensing in quantifying above ground biomass forest grass woodlands across varying spatial and temporal scales The innovative application areas of the book include algorithm development and implementation accuracy assessment scaling issues local regional global biomass mapping and the integration of microwaves i e LiDAR along with optical sensors forest biomass mapping rangeland productivity and abundance grass biomass density cover bush encroachment biomass and seasonal and long term biomass monitoring

Remote Sensing and Geographic Information Systems for Policy Decision Support R. B. Singh, Manish Kumar, Dinesh Kumar Tripathi, 2022-04-24 The management of data to understand complex and interwoven processes of sustainable development has been a great challenge for researchers planners and decision makers Remote sensing and GIS based policy decision support systems not only help them to solve spatially related environmental and socio economic issues they also provide a powerful tool for integrating spatial and non spatial datasets with analytical and spatial models and knowledge domains Recent advances in the modern spatial tools of remote sensing and GIS combined with advanced computation techniques have enhanced the efficiency and capabilities of policy development This book expands the scientific knowledge base in various physical and socio economic issues among scholars planners and decision makers for policy development and research regarding sustainable development It also demonstrates the importance of modern spatial decision support tools of remote sensing and GIS to better understand sustainable development processes and policy development Furthermore the book discusses case studies providing new insights as to how remote sensing and GIS based decision support systems contribute to understanding physical and socio economic processes and developing pragmatic policy for sustainable development This book covers land surface temperature hydrological processes terrain mapping flood and landslide hazards land use and land cover dynamics crime hotspots urban health issues tourism agriculture forest management flood mitigation urban sprawl and village information systems among others Readers will find this book to be an invaluable resource for understanding and solving diverse physical and human issues for policy

development related to sustainable planning and management The Pixels of Paul Cézanne Wim Wenders, 2018-01-30 The Pixels of Paul Cézanne is a collection of essays by Wim Wenders in which he presents his observations and reflections on the fellow artists who have influenced shaped and inspired him How are they doing it is the key question that Wenders asks as he looks at the dance work of Pina Bausch the paintings of Cézanne Edward Hopper and Andrew Wyeth as well as the films of Ingmar Bergman Michelangelo Antonioni Ozu Anthony Mann Douglas Sirk and Sam Fuller He finds the answer by trying to understand their individual perspectives and in the process revealing his own art of perception in texts of rare poignancy

Earth Observations for Geohazards Zhenhong Li, Roberto Tomás, 2018-07-05 This book is a printed edition of the Special Issue Earth Observations for Geohazards that was published in Remote Sensing Remote Sensing of Night-time Light Christopher Elvidge, Xi Li, Yuyu Zhou, Changyong Cao, Timothy A. Warner, 2021-08-09 Satellite images acquired at night provide a visually arresting perspective of the Earth and the human activities that light up the otherwise mostly dark Earth These night time light satellite images can be compiled into a geospatial time series that represent an invaluable source of information for both the natural and social sciences Night time light remote sensing has been shown to be particularly useful for a range of natural science and social science applications including studies relating to urban development demography sociology fishing activity light pollution and the consequences of civil war Key sensors for these time series include the Defense Meteorological Satellite Program's Operational Linescan System DMSP OLS and the Suomi National Polar orbiting Partnership Satellite's Visible Infrared Imaging Radiometer Suite Day Night Band Suomi NPP VIIRS DNB An increasing number of alternative sources are also available including high spatial resolution and multispectral sensors This book captures key methodological issues associated with pre processing night time light data documents state of the art analysis methods and explores a wide range of applications Major sections focus on NPP VIIRS DNB processing inter calibration between NPP VIIRS and DMSP OLS applications associated with socio economic activities applications in monitoring urbanization and fishing activity monitoring The chapters in this book were originally published as a special issue of the International Journal of Remote Sensing *Topics in Hydrometeorology* Theodore Hromadka, Prasada Rao, 2019-05-29 The field of hydrometeorology bridges across both meteorology and hydrology In this book multiple experts present their work on various topics that fall under the purview of hydrometeorology The chapters will provide readers with some of the latest developments and applications across different regions of the world and will motivate the audience to investigate other areas in hydrometeorology **Sparse representation of visual data for compression and compressed sensing** Ehsan Miandji, 2018-11-23 The ongoing advances in computational photography have introduced a range of new imaging techniques for capturing multidimensional visual data such as light fields BRDFs BTFs and more A key challenge inherent to such imaging techniques is the large amount of high dimensional visual data that is produced often requiring GBs or even TBs of storage Moreover the utilization of these datasets in real time applications poses many difficulties due to the large memory

footprint Furthermore the acquisition of large scale visual data is very challenging and expensive in most cases This thesis makes several contributions with regards to acquisition compression and real time rendering of high dimensional visual data in computer graphics and imaging applications Contributions of this thesis reside on the strong foundation of sparse representations Numerous applications are presented that utilize sparse representations for compression and compressed sensing of visual data Specifically we present a single sensor light field camera design a compressive rendering method a real time precomputed photorealistic rendering technique light field video compression and real time rendering compressive BRDF capture and more Another key contribution of this thesis is a general framework for compression and compressed sensing of visual data regardless of the dimensionality As a result any type of discrete visual data with arbitrary dimensionality can be captured compressed and rendered in real time This thesis makes two theoretical contributions In particular uniqueness conditions for recovering a sparse signal under an ensemble of multidimensional dictionaries is presented The theoretical results discussed here are useful for designing efficient capturing devices for multidimensional visual data Moreover we derive the probability of successful recovery of a noisy sparse signal using OMP one of the most widely used algorithms for solving compressed sensing problems

Application of genetically encoded indicators to mammalian central nervous system Yoshiyuki Yamada,University of Geneva,Katsuhiko Mikoshiba,2016-04-06 Genetically encoded indicators emerged as promising tools for cell type specific and chronic recording of neuronal population activity Since publication of the first prototypical genetically encoded Ca²⁺ indicators Cameleons in 1997 we have witnessed remarkable evolution of the field with rapid improvement of indicator performance as well as expanded application to many model organisms in the neuroscience community Challenges still remain however concerning the mammalian central nervous system limited sensitivity of indicators to subtle changes in activity slow signal kinetics cytotoxicity after a long term and high level expression of

indicators and variable performance across cell types In addition to improvement of the indicators per se development of strategies that allow combined use of the indicators and optogenetic tools is also desired In this Research Topic we recruited top researchers in the field and their young colleagues to present their cutting edge research as well as insightful opinions on the following subtopics 1 Latest breakthroughs on development of genetically encoded indicators 2 Novel scientific findings obtained with genetically encoded indicators 3 Wishlist for the next generation genetically encoded indicators 4 Guideline for selecting an appropriate indicator 5 Optimal methodology for indicator delivery to mammalian CNS
