Plants' Responses to Novel Environmental Pressures Alessio Fini, Massimiliano Tattini, Raquel Esteban, 2018-02-01
Plants have been exposed to multiple environmental stressors on long term seasonal and short term daily basis since their appearance on land. However, the frequency and the intensity of stress events have increased much during the last three decades because of climate change. Plants have developed however a multiplicity of modular and highly integrated strategies to cope with challenges imposed by novel usually harsher environments. These strategies include migration, acclimation, and adaptation. Twelve articles in this research topic exactly focus on the relative significance of these response mechanisms for the successful acclimation of plants to a wide range of novel environmental pressures. Four articles additionally explore how plants respond to severe stress conditions resulting from the concurrent action of multiple stressors. Ten articles mostly examine how morpho-anatomical, physiological, and biochemical related traits integrate when plants suffer from novel threats such as solid gaseous and electromagnetic pollutants. Suitable physiological indicators for developing conservation strategies are described in the last two works. This research topic highlights that bottom up as well as top down approaches will be necessary to develop in near future in the study of plants' responses to environmental pressures. *Environmental Pollution and Plant Responses* Shashi Bhushan Agrawal, Madhoolika Agrawal, 2023-01-30
Comprehensive and global in scope, *Environmental Pollution and Plant Responses* provides an analysis of the research on the factors contributing to the deteriorating environmental quality and its effect on plant performance. The issues include environmental pollution and global climate change, response patterns of plants at different levels, mechanisms of interaction, tolerance strategies, and future research prospects. The author evaluates trends and gives management strategies for abating the problem. This volume highlights the complexities of environmental problems and the affect of pollution on every level of the ecosystem. **Plant Response to Gold Nanoparticles** Azamal Husen, 2024-12-01
In this book, overall plant and soil system are examined exclusively in terms of gold nanoparticles. Au NPs exposure influences plant growth and yield performance. They also affect plant and soil system interactions. Au NPs responses are primarily dependent on the concentration, plant species, or cultivars, exposure time, shape, and size of NPs. Investigation has shown that the lower concentrations of Au NPs increase seed germination, beneficial biochemical components, rate of photosynthesis, and overall growth. However, at higher concentrations, all these responses are declined in different plant species. At higher concentration, Au NPs induce stress in plants, create phytotoxicity, and produce reactive oxygen species which leads to the disruption of cellular metabolism. Further, at higher concentration, Au NPs hampered the physico-chemical process of plant and soil system. Moreover, the molecular and physiological performance showed that the exposure of Au NPs resulted in oxidative stress and induced antioxidative and defense responses. The energy production related to metabolic pathways were also influenced by Au NPs exposure. Au NPs exposure accelerated the number of chromosomal aberrations, micronuclei, and decreased the mitotic index in plant root tip.

cells Proteomic study has shown that the exposure Au NPs resulted in an accumulation of protein precursors indicative of the dissipation of a proton motive force Au ions were noticed in roots and shoots while Au NPs were absorbed only in the plant root tissues Au NPs exposure also influence flowering process and seed germination Beside the terrestrial plants these particles have also influenced the growth of some wetland and aquatic plants It was also noticed that the addition of Au NPs into the culture medium had also influence the in vitro development and multiplication of plants Studies have begun to examine how arbuscular mycorrhizal fungi might affect the uptake of specific nanoparticles include Au and how these particles might influence the plant mycorrhizal relationships The impact of Au NPs on the size and structure of microbial communities in soil and soil enzymatic activities for glucosidase urease alkaline phosphatase and dehydrogenase has been examined In the present book environmental safety and ethical issues related to use of Au NPs in plant and soil system has been also explored Overall this book is provide an up to date most important and selected information associated with the plant response to Au NPs This book will be a good resource for upper level students faculty scientists and researchers working specially on plant biology plant nanobiotechnology plant biochemistry plant microbiology agricultural and other allied subjects and or science Plant Responses to Hypoxia Elena Loreti, Gustavo Striker, 2021-03-02 Molecular oxygen deficiency leads to altered cellular metabolism and can dramatically reduce crop productivity Nearly all crops are negatively affected by a lack of oxygen hypoxia due to adverse environmental conditions such as excessive rain and soil waterlogging Extensive efforts to fully understand how plants sense oxygen deficiency and their ability to respond using different strategies are crucial to increase hypoxia tolerance Progress in our understanding has been significant in recent years This topic certainly deserves more attention from the academic community therefore we have compiled a series of articles reflecting the advancements made thus far *UPSC Indian Forest Service [IFS] Mains Botany 300 Questions With Answers Written By Expert Faculty* DIWAKAR EDUCATION HUB ,2024-05-17 Indian Forest Service IFS Mains Botany 300 Questions With Answers Written By Expert Faculty Paper 1 2 Highlight of Book Given 300 Questions with Suggested Answer 150 Question of Each Paper As per Paper Pattern Include Both Paper 1 2 Questions Answers Written by Finest faculty

Frontiers of Sulfur Metabolism in Plant Growth, Development, and Stress Response Stanislav

Kopriva, Dibyendu Talukdar, Hideki Takahashi, Rüdiger Hell, Agnieszka Sirko, Stanislaus F. D' Souza, Tulika Talukdar, 2016-09-07 Growing plants have a constitutive demand for sulfur to synthesize proteins sulfolipids and other essential sulfur containing molecules for growth and development The uptake and subsequent distribution of sulfate is regulated in response to demand and environmental cues The importance of sulfate for plant growth and vigor and hence crop yield and nutritional quality for human and animal diets has been clearly recognized The acquisition of sulfur by plants however has become an increasingly important concern for the agriculture due to the decreasing S emissions from industrial sources and the consequent limitation of inputs from atmospheric deposition Molecular characterization involving transcriptomics proteomics and metabolomics in *Arabidopsis thaliana* as well as in major crops revealed that sulfate uptake distribution and assimilation are finely regulated depending on sulfur status and demand and that these regulatory networks are integrated with cell cycle photosynthesis carbohydrate metabolism hormonal signaling uptake and assimilation of other nutrients etc to enable plant growth development and reproduction even under different biotic and abiotic stresses This knowledge can be used to underpin approaches to enhance plant growth and nutritional quality of major food crops around the world Although considerable progress has been made regarding the central role of sulfur metabolism in plant growth development and stress response several frontiers need to be explored to reveal the mechanisms of the cross talk between sulfur metabolism and these processes In this research topic the knowledge on plant sulfur metabolism is reviewed and updated Focus is put not only on molecular mechanisms of control of sulfur metabolism but also on its integration with other vital metabolic events The topic covers 4 major areas of sulfur research sulfate uptake assimilation and metabolism

regulation and role in stress response We hope that the topic will promote interaction between researchers with different expertise and thus contribute to a more integrative approach to study sulfur metabolism in plants
