have been identified and used since ancient times to improve the sensory characteristics of food. The main compounds found in plants correspond to four major biochemical classes: Polyphenols, terpenes, glycosides, and alkaloids. Plants synthesize these compounds for a variety of purposes including protection of the plant against fungi and bacteria, defense against insects, and attraction of pollinators and dispersal agents to favor the dispersion of seeds and pollens. Handbook of Food Preservation

M. Shafiur Rahman, 2007-07-16 The processing of food is no longer simple or straightforward but is now a highly interdisciplinary science. A number of new techniques have developed to extend shelf life, minimize risk, protect the environment, and improve functional, sensory, and nutritional properties. The ever-increasing number of food products and preservation techniques create a need for a comprehensive reference work. *Bioactive Compounds and Nutraceuticals from Plant Sources* Charanjit S.
