The Oxford Guide to the Languages of the Central Andes Matthias Urban, 2025-03-27

This volume presents the most comprehensive overview in English of the languages of the Central Andes spoken primarily in Peru and Bolivia. Efforts to describe and document Central Andean languages as well as philological research into colonial documentation and texts have blossomed in recent decades; here the major protagonists and drivers of these exciting developments are given the opportunity to showcase their research achievements in one volume. Following an introductory part providing background information on the region and its cultural and linguistic diversity, chapters in Part II provide extensive descriptions of individual languages that not only reflect current knowledge but also add to our understanding of their phonological and grammatical structures. The third part offers substantial typological comparative analyses that reflect the pivotal role Central Andean languages have played in investigations into topics of current theoretical interest such as the notions of linguistic complexity and evidentiality. Part IV explores topics relating to the history of the language from early prehistory to the colonial period, while chapters in the final part shed light on the cultural, geographic and sociolinguistic settings in which Central Andean languages are spoken and discuss language contact situations and language ideologies. The Oxford Guide to the Languages of the Central Andes will be of interest not only to students and researchers specializing in Andean languages but also to typologists, comparative linguists and linguistic anthropologists.

Silicon-Based Polymers and Materials Jerzy J. Chruściel, 2022-03-07. Silicon-based materials and polymers are made of silicon-containing polymers, mainly macromolecular siloxanes, silicones. This book covers the different kinds of silicon-based polymers: silicones, silsesquioxanes, POSS and silicon-based copolymers. Other silicon-containing polymers: polycarbosilanes, polysilazanes, siloxane-organic copolymers, silicon-derived high-tech ceramics, silicon carbide and oxycarbide, silicon nitride, etc. have also a very important practical meaning and a huge number of practical applications. These materials make up products in a variety of industries and products, including technical and medical applications. Polycrystalline silicon is the basic material for large-scale photovoltaic (PV) applications as solar cells. Technical applications of crystalline c-Si and amorphous a-Si silicon fully inorganic materials: silicon nanowires are still quickly growing, especially in the field of microelectronics, optoelectronics, photonics and photovoltaics, catalysts and different electronic devices, e.g. sensors, thermoelectric devices. This book is ideal for researchers and, as such, covers the industrial perspective of using each class of silicon-based materials. Discusses silanes, silane coupling agents, SCA, silica, silicates, silane-modified fillers, silsesquioxanes, silicones and other silicon polymers and copolymers for practical applications as polymeric materials and very useful ingredients in materials science.
