Ware, Richard J.

Millard, 2013-02-01 Because this book's main objective is to foster and promote student development, it should appeal to those who advise, counsel, and teach undergraduate and graduate students, particularly those in psychology education and other social sciences. Along with a plethora of stimulating ideas for practice and research, the book contains the results of research having immediate applications to students' educational and career direction needs. Readers will find more than 90 articles in this book distributed across three significant challenges to students' development: the academic, occupational, and personal. Further, the material presented has been organized around three distinct approaches to these challenges: advising, career development, and field placement activities. The source for these articles is the official journal *Teaching of Psychology* of Division Two of the American Psychological Association. Understanding Test and Exam Results Statistically Kaycheng Soh, 2016-08-09 This book shares the goal of the classic text *How to Lie with Statistics*, namely, preventing and correcting statistical misconceptions that are common among practitioners, though its focus is on the educational context. It illustrates and discusses the essentials of educational statistics that will help educational practitioners to do this part of their job properly, i.e., without making conceptual mistakes. The examples are cast in the school classroom contexts based on realistic rather than theoretical examples. The strongest aspect of the work, or author's view, is that the author can put himself in the shoes of teachers and make the work a very practical guide for teachers and school leaders. As a very experienced educator and researcher, the author knows very well about the knowledge and skills that are essential for the professional development of teachers. He is able to explain the statistical and measurement concepts in plain language and with examples that are highly relevant to the target audience. In addition, the author also conveyed an important message to the target audience throughout the work by pointing out the mistakes and misunderstandings of the interpretation of test scores and measurement design. The author reminds the audience about the importance of proper use of tests and test scores when teachers and school leaders make any education decisions, which has much implication on the professional integrity of teachers and school leaders. Dr. Joyce Kwan, The Education University of Hong Kong, Hong Kong. This book covers all the statistical tools for analyzing educational data and provides examples to explain the ideas. Chapters 10-17 are practical data analysis in educational data that helps readers have a better understanding of the procedure to analyze the data. Dr. Alpha Ling, The Education University of Hong Kong, Hong Kong. It looks like a very interesting book with attractive topics and practical problems in educational statistics. Though the topics remind me of the classic book *How to Lie with Statistics*, this book aims

at preventing and correcting statistical misconceptions in educational context Dr Zhu Ying National Institute of Education Nanyang Technological University Singapore
