

**Chapter 15 – Taxation and Efficiency**

1.
  - a. The supply of land is fixed, or perfectly inelastic, so there is no excess burden because the lower price that sellers receive does not cause quantity supplied to fall.
  - b. If consumers purchase cell phones in other states in order to avoid the tax, then the excess burden will be quite large.
  - c. It is possible that companies could identify themselves as high-tech in order to receive the subsidy. Thus, the supply is quite elastic, and there will be substantial excess burden.
  - d. Consumers and sellers will likely agree to avoid cups and glasses in order to avoid the tax. A tax that is easily avoided does not have much of an impact, except to create some inconvenience, and does not raise revenue.
  - e. A tax on all computer software will have a smaller excess burden (relative to revenues collected) than a tax on one particular type of software like the Excel spreadsheet. This is because it is easier to substitute away from one type of software than software in general.
  - f. There are many good substitutes for blueberries. Therefore, their demand is quite elastic, and a tax on them will have a substantial excess burden, relative to the size of revenues collected.
2. Equation 15.3 relates excess burden to elasticity, price, quantity, and the tax rate. Replacing a general sales tax with a tax on a few products would require a higher tax rate, which increases excess burden, other things equal. The equation indicates that it is better to tax many commodities at a lower rate than to tax a few commodities at a higher rate.
3. The quote is misleading. The way in which the presence of the  $t$ -squared makes the tax more “important” is that when the tax increases, the excess burden increases with its square. Thus, when the tax doubles, the excess burden quadruples.
4. Figure 15.9 shows how a tax on market activity leads to “too much” nonmarket activity. More generally, the model shows that when different sectors are taxed at different rates, the allocation of resources is distorted, and real income falls as a result. The more pervasive distortionary taxes are in an economy, the more severe the misallocation of resources, and the lower is real income. Hence, it is no surprise that economies with a lot of distortionary taxes tend to grow relatively slowly.
5. It is likely that the elasticity of demand for television is quite inelastic. It follows that the excess burden from a \$233 per year television tax is small relative to the revenues that are collected.
