- For the past several years, many people have said that they are all of the same color. However, a new study has shown that there are actually many different colors of people. The study found that there are at least 10 different colors of people. This is a significant finding because it shows that there is more diversity than we previously thought. The study also found that there are many different shades of each color. This means that there is a wide range of people in every color. The study was conducted by a team of scientists who used a special machine to measure the color of people's skin. They found that there are many different colors of people, and that there are many different shades of each color.
