Kirch, Michele Amoroso, 2016-02-10 Can I

contribute to science Do I like to work on the problems of science How do scientists know what they know Would I like to be become a scientist These are questions that interest new science students The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning They argue that students are typically taught from a disciplinary perspective of science Using this lens students are viewed as people who need to learn a particular canon of information methods and ways of knowing about the world a perspective that may be useful for practicing scientists but not ideal for young learners In this disciplinary approach to science education there is little room for development as a scientist In contrast the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity The historical explorations theoretical insights and practical advice presented here are appropriate for all ages and educational settings In Being and Becoming Scientists Today the authors provide new tools for thinking about science ideas for how to reveal the multiple stories of knowledge production to learners and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals In these ways the authors promote the idea that all science learners contribute to the science in our lives Educart NEET 37 Years Chemistry Solved Papers (PYQs) Chapterwise and Topicwise for NEET 2025 Exam Educart, Dr. Rakshita Singh, 2024-07-25 *Fact and Fiction in Global Energy Policy* Benjamin K.

Gender and Climate Change Joane Nagel, 2025-08-05

Does gender matter in global climate change This timely and provocative book takes readers on a guided tour of basic climate science then holds up a gender lens to find out what has been overlooked in popular discussion research and policy debates We see that around the world more women than men die in climate related natural disasters the history of science and war

are intimately interwoven masculine occupations and preoccupations and conservative men and their interests drive the climate change denial machine We also see that climate policymakers who embrace big science approaches and solutions to climate change are predominantly male with an ideology of perpetual economic growth and an agenda that marginalizes the interests of women and developing economies The book uses vivid case studies to highlight the often surprising gendered impacts of climate changes This new edition is a thorough update that includes revised and new chapters and new material that takes account of the significant advances in climate research environmental and social theory and the many political and social challenges posed in the wake of US elections Covid 19 pandemic and rapidly changing climate and environment The new edition also takes account of important social and cultural movements that resist challenges to women s rights and advocate for gender sexuality and racial justice This book will appeal to students researchers and academicians interested in environmental studies and gender studies It also will be of interest to policymakers activists and others involved with environmental policy and governance
