Public Lands Management And Marine Spatial Planning:

From the Forest to the Sea - Public Lands Management and Marine Spatial Planning Morgan Gopnik, 2015-01-09 The management of common pool resources and publicly owned areas is fraught with difficulty This book explores the long complex and frequently contentious history of public lands management in the United States in order to draw lessons for the emerging field of marine spatial planning MSP The author first establishes that these two seemingly different settings are in fact remarkably similar drawing on established theories of policy analysis The work then examines the management of US National Forests over the past 120 years including three place based case studies to discover recurring themes The analysis shows how different management approaches evolved over time in response to changing laws and cultural norms producing outcomes favored by different constituencies This history also reveals the ambiguities and contradictions inherent in multiple use management of any public space Next the book analyzes recent efforts to advance MSP both in the US and globally showing how they mirror past experiences in National Forest management including similar disagreements among stakeholders In conclusion the author suggests how those within ocean related sectors government academia industry and environmental groups might achieve their individual and collective goals more effectively based on lessons from the public lands setting

An Historical Look at Planning for the Federal Public Lands Robin Kundis Craig, 2015 The federal government controls far more offshore public lands the Outer Continental Shelf than it controls terrestrial lands but the oceans have been bereft of the kind of comprehensive planning mandated for other public lands under statutes like the Federal Lands Policy and Management Act FLPMA or the National Forest Management Act NMFA Beginning with the Oceans Act of 2000 however the federal government has considered adopting comprehensive planning for the oceans generally known as marine spatial planning or marine zoning Indeed reports such as those from the Pew Oceans Commission in 2003 and the U S Commission on Ocean Policy in 2004 strongly recommended national and regional marine spatial planning for the United States oceans When the National Ocean Council proposed its Implementation Plan for the newly created U S Ocean Policy it would have required comprehensive regional marine spatial planning in all U S ocean waters In April 2013 however the Council s Final Implementation Plan reclassified marine spatial planning from a mandatory activity to a voluntary one once again leaving the nation s offshore lands and waters without any legal mandate for comprehensive planning This gap has important implications for offshore energy production and adaptation to climate change it also perpetuates the regulatory fragmentation of ocean jurisdiction that prompted Congress to enact the Oceans Act fourteen years ago This Article explores the implications of the Final Implementation Plan for the future of a comprehensive governance regime for the nation s offshore resources comparing the history of marine spatial planning in the United States to the histories of comprehensive planning for other federal public lands
