

The 5 phases of the project life cycle

01

Initiation

Initiation is the project kick-off phase. This is when you collect all the information needed from key stakeholders. This phase defines the problem and details what needs to be done.

02

Planning

The planning phase is the foundation for the project. This is when you detail all the work, how you plan on doing it, and what resources you'll need to meet project goals.

03

Execution

The execution phase is when you get stuff done. This is where you put everything you planned into motion and complete deliverables to achieve the project objectives.

04

Monitoring

The monitoring phase goes hand-in-hand with the execution phase. It's about monitoring the project's overall progress to see if you're meeting project objectives and are on track.

05

Closure

The closure phase wraps things up. You'll hand over documentation, release final deliverables, terminate contracts, and inform everyone that the project is complete.

Managing Construction Projects Graham M. Winch, 2009-12-30

Project management is of critical importance in construction yet its execution poses major challenges. In order to keep a project on track decisions often have to be made before all the necessary information is available. Drawing on a wide range of research *Managing Construction Projects* proposes new ways of thinking about project management in construction exploring the skills required to manage uncertainty and offering techniques for thinking about the challenges involved. The second edition takes the information processing perspective introduced in the first edition and develops it further. In particular this approach deepens the reader's understanding of the dynamics in the construction project process from the value proposition inherent in the project mission to the functioning asset that generates value for its owners and users. *Managing Construction Projects* is a unique and indispensable contribution to the available literature on construction project management. It will be of particular benefit to advanced students of construction and construction project management as well as contractors and quantity surveyors.

Reviews of the First edition A massive review of the art and science of the management of projects that has the great virtue of being a good read wherever it is touched. It spills the dirt on things that went wrong, elucidates the history so you can understand the industry's current stance, draws on other countries' experience and explains the latest management processes. Throughout it is liberally sprinkled with anecdotes and case histories which amply illustrate the dos and don'ts for practitioners wishing to deliver projects on time to expected quality and price. A valuable book for students and practitioners alike. John D. Findlay, Director, Stent. This is a valuable source for practitioners and students. It covers the A-Z of project management in a confident, contemporary manner and provides a powerful and much needed conceptual perspective in place of a purely prescriptive approach. The engaging presentation introduces a range of challenges to established thinking about project management often by making comparisons between practices in the UK and those of other countries. Peter Lansley, Professor of Construction Management, University of Reading. A refreshing and unique study of information management and its impact upon international construction project management. The book is well presented and written, logical and succinct and is flexible enough to allow readers to either read from start to finish or to dip into selected chapters. This book deserves to be an established text for any construction or civil engineering under and or postgraduate course. CNBR, 25th November 2003. Generous use is made of anecdotes and case histories throughout to support the theory the book illustrates the mistakes made by others and the means to deliver projects on time and to cost. Building Services Journal, April 2004.

Governance in the Information Era Erik W. Johnston, 2015-02-20. Policy informatics is addressing governance challenges and their consequences which span the seeming inability of governments to solve complex problems and the disaffection of people from their governments. Policy informatics seeks approaches that enable our governance systems to address increasingly complex challenges and to meet the rising expectations of people to be full participants in their communities. This book approaches these challenges by applying a combination of the latest American and European approaches in applying complex
