Dmitri Mendeleev developed a chartlike arrangement of the elements called the __ (1) __. He stated that if the elements were listed in order of increasing __ (2) __, their properties repeated in a regular manner. He called this the __ (3) __ of the elements. The arrangement used today, devised by __ (4) __, differs from that of Mendeleev in that the elements are arranged in order of increasing __ (5) __. Each horizontal row of elements is called a(n) __ (6) __. Each vertical column is called a(n) __ (7) __, or, because of the resemblance between elements in the same column, a(n) __ (8) __.

In rows 4 through 7, there is a wide central section containing elements, each of which is called a(n) __ (9) __. Rows 6 and 7 also contain two other sets of elements that are listed below the main chart. These are called the __ (10) __ and the __ (11) __, respectively. Each of these elements, as well as those in the first two columns at the left end of the chart, is classified as a(n) __ (12) __. Each of the elements at the right side of the chart is classified as a(n) __ (13) __. Each of the elements between these two main types of elements, having some properties in common with each, is called a(n) __ (14) __.

Each of the elements in the column labeled 1 is called a(n) __ (15) __. Each of the elements in the column labeled 2 is called a(n) __ (16) __. Each of the elements in column 17 is called a(n) __ (17) __. Each of the elements in column 18 is called a(n) __ (18) __.
