A Practical Guide to Testing Wireless Smartphone Applications Julian Harty, 2022-06-01 Testing applications for mobile phones is difficult time consuming and hard to do effectively Many people have limited their testing efforts to hands on testing of an application on a few physical handsets and they have to repeat the process every time a new version of the software is ready to test They may miss many of the permutations of real world use and as a consequence their users are left with the unpleasant mess of a failing application on their phone Test automation can help to increase the range and scope of testing while reducing the overhead of manual testing of each version of the software However automation is not a panacea particularly for mobile applications so we need to pick our test automation challenges wisely This book is intended to help software and test engineers pick appropriately to achieve more and as a consequence deliver better quality working software to users This Synthesis lecture provides practical advice based on direct experience of using software test automation to help improve the testing of a wide range of mobile phone applications including the latest AJAX applications The focus is on applications that rely on a wireless network connection to a remote server however the principles may apply to other related fields and applications We start by explaining terms and some of the key challenges involved in testing smartphone applications Subsequent chapters describe a type of application e g markup AJAX Client followed by a related chapter on how to test each of these applications Common test automation techniques are covered in a separate chapter and finally there is a brief chapter on when to test manually The book also contains numerous pointers and links to further material to help you to improve your testing using automation appropriately Table of Contents Introduction Markup Languages Testing Techniques for Markup Applications AJAX Mobile Applications Testing Mobile AJAX Applications Client Applications Testing Techniques for Client Applications Common Techniques When to Test Manually Future Work Appendix A Links and References Appendix B Data Connectivity Appendix C Configuring Your Machine [Human-Computer Interaction](#) Peter Forbrig, Fabio Paternó, Annelise Mark Pejtersen, 2010-08-23 The IFIP World Computer Congress WCC is one of the most important conferences in the area of computer science at the worldwide level and it has a federated structure which takes into account the rapidly growing and expanding interests in this area Informatics is rapidly changing and becoming more and more connected to a number of human and social science disciplines Human computer interaction is now a mature and still dynamically evolving part of this area which is represented in IFIP by the Technical Committee 13 on HCI In this WCC edition it was interesting and useful to have again a Symposium on Human Computer Interaction in order to present and discuss a number of contributions in this field There has been increasing awareness among designers of interactive systems of the importance of designing for usability but we are still far from having products that are really usable and usability can mean different things depending on the application domain We are all aware that too many users of current technology often feel frustrated because computer systems are not compatible with their abilities and needs in existing work practices As
