You Don't Know Tony

People stare at my older brother whenever he goes, although everybody must be able to understand that people with special needs are

the rescue. In short, he's sweet, smart, compassionate, and talented. And you know he must be really awesome because it's his younger brother, and this is going about

Cesar Chavez

Chavez was born in 1927 to a Mexican American family. They ran a small farm near the California-Mexico border. In 1952, they lost their farm after being tricked by some dishonest men and became migrant farm workers in California. During harvest season, they lived in their car or under a tree with just a few dollars.

The Abandoned House

"Anyone who goes in that house is destined to be attacked by zombies. Or is living, or something, in there?" Kaylee asks. "No, anyone who goes in that house deserves to become a legend at Harper School," Marissa countered.

Everyone at their lunch table knew those they were talking about without it being said. They had recognized on the end of a long day all their evil, broken windows, missing straight out

movie. In the past, students claimed to have gone inside at night, but none had ever produced proof.

Kina and Jasmine spread their sleeping bags on Kaylee's bed. But no one was ready for sleep. As they discussed their options for the evening's

Bony Fish vs. Cartilaginous Fish

efficient - achieving or desired result without wasting energy
support - to hold up
diverse - made up of many things or groups that are different from each other

Touch the tip of your nose and gently push on it. It moves, right? That's because your nose gets its shape from a material called cartilage rather than from bone. Cartilage also gives shape to your ears and whiskers, and it cushions many joints, including your elbows, knees, and ankles as well as those in your spine. Both firm and supportive, cartilage is softer and more flexible than bone.

Now that you know what cartilage is, imagine if your entire skeleton were made of it. Your arms and legs

would bend instead of providing strong support. Your skull wouldn't be able to protect your brain nearly as well. You'd have to learn completely new ways to move and do things.

The idea of a cartilaginous skeleton isn't all-bad. It's really fun if you're a shark, ray, skate, or eel. It's really fun if you're a group of fish. Sharks, rays, skates, and eels are all cartilaginous fish. They account for less than 1 percent of all fish and about 1,000 living species. In contrast, there are at least 28,000 living species of fish. Almost all cartilaginous fish live in oceans, which contain salt water. Bony fish are found in both fresh and salt water.

Two fast groups of fish offer a few important ways. One group, called chondrichthyes, lives in the oceans. Cartilage is strong, but it's not as strong as bone. Having a lighter skeleton allows sharks and their relatives to swim faster and use less energy. Coming from the same efficient cartilage gives them and their predators, and they have less food. Another reason some faster is because their skeleton is flexible, so they can bend and turn quickly.

A yellow perch, an example of a bony fish.

A great white shark, an example of a cartilaginous fish.
