because of pressures from the school accountability system The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening with consequences for grade awarding The current status of Ofqual as an independent regulator accountable to Parliament is the right one However the Coalition Government is bringing in wholesale changes to GCSEs and A levels to a tight timetable and at the same time Ofqual must have systems in place The Committee is also concerned that there is a rush towards separate exam systems for England Wales and Northern Ireland without careful reflection on what might be lost or consensus that this is the right thing to do

Malacothamnus: Volume 1 Keir Morse, 2023-08-18 The taxonomy of the genus *Malacothamnus* Malvaceae has been controversial for many years due to conflicting treatments and the many taxa of conservation concern not recognized in some of these treatments Purported intergradation and hybridization are the primary justifications for not recognizing these taxa Two recent morphological studies examining small subsets of *Malacothamnus* taxa debunked the purported ambiguities between the taxa analyzed and provided evidence for a new species This indicated a morphological assessment of the full genus would be highly beneficial to identify and clarify both morphological groupings and character states within the genus prior to testing taxon hypotheses within a phylogenetic framework This study follows the previous two by examining the remaining subsets of *Malacothamnus* taxa that have been combined and/or confused in the past These subsets are analyzed with principle component analysis PCA pairwise permutational multivariate analysis of variance PERMANOVA and linear discriminant analysis LDA to answer 1 whether taxa relegated to synonymy by some authors are morphologically distinct or not 2 whether there is morphological evidence to support purported intergradation between taxa 3 whether previously defined morphological boundaries between

taxa are justifiable or need refining and 4 whether populations of hypothesized novel taxa are morphologically distinct from the taxa they have been included within Twenty nine previously named and nine unnamed morphological groupings were recovered in taxon subset analyses These were then included in a global analysis of the genus followed by comparisons of morphological characters between all groupings The 38 morphological groups recovered range in distinctness from clear taxa that are both morphologically and geographically distinct to intergrading forms needing further research to base taxonomic decisions upon These 38 morphological groups are assessed as hypothetical lineages using phylogenetic analyses in Volume 2 of this monograph
