Cities Come From and Where Are They Going To? Modelling Past and Present Agglomerations to Understand Urban Ways of

Life Francesca Fulminante,John William Hanson,Scott G. Ortman,Luis M. A. Bettencourt,2021-01-25 Over the last decade

there has been a surge of interest in urbanization and economic development sparked by the realization that making urban life sustainable is one of the greatest challenges facing us in the 21st century this is now one of the core sustainable development goals of the United Nations This has exerted considerable pressure on researchers to come up with more scientific ways of studying urbanism and economic activity over the long run which has resulted not only in the development of new theoretical frameworks but also in the collection of vast amounts of data from a range of settings This has led to the realization that although there are significant differences between settlements in different settings there are nonetheless important regularities and commonalities between a diverse group of settlements in range of geographical and historical contexts including both ancient and modern ones This suggests that a common feature of settlements is their ability to generate increased social connectivity greater division of labour and specialization and enhanced technological invention and innovation albeit with costs to levels of equality quality of life and standards of living as well as impacts on the environment which cannot be separated from the emergence of confederations and states and the creation of settlement systems hierarchies and networks We believe that this field of enquiry now stands at a critical juncture Although it is now feasible to

talk about many aspects of ancient and modern urbanism with relative confidence such as the numbers of cities or their sizes much of the discussion of these themes within historical and archaeological circles has been on a discursive or qualitative level while it is often difficult to harmonize the different models that have been applied to date into a consistent empirical and theoretical framework A new approach to settlements throughout different contexts should now be within our grasp however thanks to both the ease with which information can be disseminated and the facilities that recent developments in IT offer us to model analyse and statistically test data

Time's Arrow and Evolution Harold Francis Blum,2015-12-08 In a book that has become a milestone of scientific writing Dr Blum uses time s arrow the second law of thermodynamics as a key concept to show how the nature and evolution of the nonliving world place limits on the nature and evolution of life He seeks to show that from the beginning of the universe physical and chemical laws have inexorably channeled the course of evolution so that possibilities were already limited when life first emerged Originally published in 1951 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
